You are reading a blog post by a British student, Ella, about a new school timetable.

Our School's Four-Day Week Trial

Since September, our school in Leeds has been trying a new timetable. Lessons now run from Monday to Thursday, from 8:30 to 16:30, and Friday is an "independent learning day". On Fridays, students can study at home, join a club project, or come to school to use the library and get help from tutors.

The head teacher says the aim is to teach students to manage their own time before university. According to the school's first report, attendance on Monday to Thursday rose from 91% to 95% in the first term. About 60% of students came to school on at least two Fridays a month.

Personally, I love having Friday to finish my coursework, but the longer days are tiring. By the last lesson on Thursday, I can hardly concentrate. My friend Sam thinks Fridays are a waste because he just sleeps late, but I think that is his choice, not the timetable's fault.

The trial will continue until July. Then the school will ask students, parents and teachers to vote on whether to keep it.

問1 Which is a fact about the trial? マーク 4

① The longer school days are tiring.
② Fridays are a waste of time.
③ Attendance from Monday to Thursday increased.
④ Students should manage their own time.

問2 On Fridays, students can _____. マーク 5

② choose where and how to study
③ only stay at home
④ leave school after lunch on Thursdays

問3 Ella's opinion of Sam's complaint is that _____. マーク 6

① he is right that Fridays are useless
② the school should check what students do on Fridays
③ how he uses Friday is up to him
④ he should come to school every Friday

問4 What will happen after July? マーク 7

The Day I Became a Guide

Last summer I volunteered at the city museum. I had imagined I would only clean display cases or carry boxes, so I was shocked when the manager, Mr. Ito, asked me to guide a group of elementary school children on my third day. "You know the dinosaur room better than anyone now," he said, smiling.

I spent the night before preparing. I wrote a script with every fact I could find: names, dates, sizes. The next morning I practised it twice in front of the mirror. But when twenty children rushed into the room, my script was useless. They did not want dates. They wanted to know if dinosaurs had bad breath and whether a T. rex could beat a lion.

At first I panicked. Then I remembered that, as a child, I had loved touching the fossil copy near the entrance. I put my script away, brought the children to the copy, and let each of them hold a piece of it. Suddenly the questions became easier: "Why is it so heavy?" "How do you know how old it is?" I answered what I could and wrote down the ones I could not.

After the tour, Mr. Ito asked how it went. I showed him my list of unanswered questions. He laughed and said that list was more valuable than any script, because next time I would know what visitors really want to learn.

問1　Why was the writer surprised on the third day?　マーク 8

① The museum was closed.
② She was given a more important job than she expected.
③ The children already knew about dinosaurs.

① She practised her script in front of a mirror.
② She let the children hold a fossil copy.
③ She showed Mr. Ito a list of questions.
④ She read every fact from her script to the children.
⑤ She wrote a script with many facts.

問3　What did the writer learn from the experience?　マーク 13

① Preparing a script is a waste of time.
② Children are not interested in museums.
③ Visitors' real questions show what to teach.
④ A guide must know the answer to every question.

Your classmate Aoi wrote a draft report for an English class. Read it and the teacher's comments, and help her improve it.

Draft: Should Our Town Have More Bicycle Lanes?

(1) Many students in our town ride bicycles to school. (2) However, there are only two short bicycle lanes, so most of us ride on narrow roads next to cars and trucks.

(3) First, bicycle lanes would make cycling safer. Last year, the town reported 38 accidents involving bicycles, and half of them happened on roads without lanes. (4) _____

(5) Second, more people might choose bicycles instead of cars. In Utrecht, a city in the Netherlands, more than 40% of trips are made by bicycle after the city built a large network of lanes. (6) I have always wanted to visit the Netherlands because of its beautiful tulips.

(7) Some people worry that lanes would make roads too narrow for cars. (8) _____ For example, a lane could be made by painting a line on the wide road in front of the station, where there is plenty of space.

Teacher's comments: A) Add a sentence after (3) that explains what the accident data means for your opinion. B) One sentence in paragraph 3 is off-topic. Remove it. C) After (7), add a sentence that replies to this worry. D) Write a better conclusion sentence for the whole report.

問1　マーク 14

Based on Comment A, which is best for (4)?

① This suggests that many accidents could be avoided with more lanes.
② Some accidents also happen to people walking.
③ The town has a population of about 50,000.
④ Bicycles are cheaper than cars.

問2　マーク 15

Based on Comment B, which sentence should be removed?

① Therefore, cars should be banned from the town centre.
② However, lanes can be added where roads are already wide enough.
③ In fact, many drivers do not like cyclists.
④ Also, bicycles are good exercise.

問4　マーク 17

Based on Comment D, which is the best conclusion?

① In conclusion, I like riding my bicycle.
② In conclusion, our town should build more bicycle lanes, starting on wide roads, to make cycling safer and more popular.
③ In conclusion, the Netherlands is a good place to live.
④ In conclusion, cars are dangerous.

In your English class, you are making notes on a short story for a group discussion.

The Second Violin

Mei had played the violin since she was five. When she joined the youth orchestra in her first year of high school, she was certain she would sit in the first violin section, where the melody is. Instead, the conductor, Mr. Hale, put her in the second violins. "The second violin is the heart of the orchestra," he said. Mei thought it was just something teachers say to people who are not good enough.

For weeks she practised without enthusiasm. Her parts were full of repeated notes and long, quiet chords. At home she played the first violin part of their piece instead, because it was more fun. When her younger brother asked why she looked bored at rehearsals, she said, "Nobody listens to the second violins."

Two weeks before the concert, the first violin leader, Kenji, broke his wrist. Mr. Hale asked Mei, who knew the first part by heart, to play it in the next rehearsal. She was thrilled. But as soon as she started, something felt wrong. Without the steady second violins behind her — the section she had just left — her melody sounded thin and lost. When the seconds came back in, the music suddenly had a floor to stand on.

After the rehearsal, Mei asked Mr. Hale if she could return to the second violins for the concert. He raised his eyebrows. "Are you sure? This is your chance." She nodded. "I finally understand what you meant. Someone has to hold the music up." Another student moved up to play Kenji's part, and Mei went back to her old chair.

On the night of the concert, Kenji sat in the audience with his arm in a cast. Afterwards he found Mei and said, "I could hear you. Every time the melody got shaky, your section caught it." Mei smiled. For the first time, the quiet notes in her part felt like the most important ones she had ever played.

You are preparing notes for a presentation based on the following article.

Why Cities Are Planting Forests on Rooftops

[1] On a hot summer afternoon, the surface of a black rooftop in a large city can reach 70°C, while the air a few metres above it is only 33°C. Thousands of such roofs heat the surrounding air, making cities several degrees warmer than the countryside. This effect, known as the "urban heat island," increases the use of air conditioning and can be dangerous for elderly people.

[2] One solution that many cities are now trying is the green roof: a layer of soil and plants on top of a building. Plants cool the air in two ways. First, they shade the roof from direct sunlight. Second, they release water vapour from their leaves, a process that takes heat from the surroundings, much as sweat cools our skin.

[3] The effects can be large. A study in Toronto found that a green roof reduced the energy a building used for cooling in summer by up to 75%. Green roofs also absorb rainwater. During heavy rain, a normal roof sends water directly into the drains, which can overflow; a green roof holds much of the water and releases it slowly.

[4] However, green roofs are not perfect. They are heavy, especially when wet, so older buildings may need to be strengthened first. They also cost more to build than ordinary roofs and require regular care, such as weeding and watering in dry seasons. For these reasons, some cities choose "cool roofs" instead — roofs painted white to reflect sunlight. Cool roofs are cheap, but they do not hold rainwater or provide a home for insects and birds.

[5] Cities that have succeeded with green roofs usually combine rules and rewards. In some cities, new large buildings must cover part of their roof with plants. Others offer money to owners who add green roofs to existing buildings. As a result, the area of green roofs in these cities has grown steadily, and researchers are now measuring how they affect not only temperature but also people's well-being.

問1　マーク 32

Note 1 (Problem): The "urban heat island" means that _____.

① cities are cooler than the countryside
② cities become warmer than surrounding areas
③ rooftops are always cooler than the air
④ air conditioners stop working in summer

問2　マーク 33〜34

Note 2 (How plants cool): Which TWO processes are described? (The order does not matter.)

① Blocking sunlight
② Reflecting light with white paint
③ Releasing water from leaves
④ Producing cold air from roots
⑤ Absorbing heat into the soil forever

問3　Note 3 (Benefits): Which is NOT mentioned as a benefit of green roofs?　マーク 35

① Lower energy use for cooling
② Less risk of drains overflowing
③ A place for insects and birds to live
④ Lower building costs

問4　Note 4 (Comparison): Compared with green roofs, cool roofs are _____.　マーク 36

① heavier but better for wildlife
② cheaper but do not store rainwater
③ more expensive and need more care
④ better at absorbing heavy rain

問5　Note 5 (What works): Which city is following the approach described in [5]?　マーク 37

① City A paints all roofs white and stops there.
② City B requires green roofs on new big buildings and pays owners who add them to old ones.
③ City C bans air conditioning in summer.
④ City D removes rooftop plants to reduce weight.

You are writing a report on the question: "Should schools start later in the morning?" Read the opinions and data, and complete your outline.

Step 1: Opinions

Dr. Mills (sleep scientist)	Teenagers' body clocks naturally shift later, so many cannot fall asleep before 23:00. Starting school at 8:30 or earlier forces them to wake up before their bodies are ready. Starting at 9:00 or later would match their biology.
Ms. Tanaka (high school teacher)	If school starts later, club activities will end later, and students will get home after dark. I support a later start only if we also shorten the school day.
Rin (high school student)	I often fall asleep in first period. When we had a 9:30 start during exam week, I felt much more focused. I think a later start would help me learn.
Mr. Okada (parent)	I leave for work at 7:30 and drop my son at school on the way. A later start would mean he has to go alone, and our bus service is limited. Changing the time would cause problems for many working families.
Ms. Garcia (school principal in the US)	Our school moved from 7:45 to 8:45 three years ago. Attendance improved and the number of students late for school fell by half. We adjusted bus routes with the city, which took a year of planning.

Step 3: Data

Survey of 1,000 high school students	%
Sleep less than 7 hours on school nights	64
Feel sleepy in first period at least 3 days a week	58
Go to bed after 23:30	47
Use a smartphone in bed for more than 30 minutes	52

④ (B) A later start removes the need for clubs.

問4　マーク 42〜43

Step 3: Choose TWO pieces of data that best support "Students need a later start because they lack sleep." (The order does not matter.)

① 64% sleep less than 7 hours on school nights.
② 58% feel sleepy in first period at least 3 days a week.
③ 47% go to bed after 23:30.
④ 52% use a smartphone in bed for over 30 minutes.
⑤ The survey asked 1,000 students.

問5　マーク 44

問1 正解 ③ （2点）
根拠 Rin は自分の居眠り・試験週間の体験から述べている。Dr. Mills は科学、Ms. Garcia は学校運営の結果。

問2 正解 ② （3点）
根拠 Ms. Tanaka：部活が遅くなり暗くなってから帰る。Mr. Okada：送れなくなる・バスが少ない。

問3 正解 (A) Dr. Mills and Ms. Garcia (B) 1つ目の文（10代に合い、実際に効果も出ている） （4点）
根拠 Dr. Mills：体内時計に合う（科学的理由）。Ms. Garcia：出席が改善・遅刻が半減（実例）。
ほかの組 Ms. Tanaka は条件つき。Mr. Okada は反対。
配点 空所すべて正解で4点。

問4 正解 ①・② （4点）
根拠 ① 睡眠不足そのもの。② 1時間目の眠気＝始業が早すぎる影響。
