神戸大学 前期日程 対策 ／ 問題

注意　解答はすべて解答用紙の指定のところに記入しなさい。

外国語（英　語）　　125点

注意

1. この冊子は問題部分と解答用紙からなる。解答はすべて解答用紙の指定のところに記入しなさい。
2. 大問は I〜IV の4題，配点は I 35点・II 35点・III 30点・IV 25点（計125点）。
3. 字数指定のある日本語の解答では，句読点も1字に数える。
4. 本冊子の英文・設問・図表はすべてオリジナルで，IV の図表のデータは架空のものである。

神戸大学の過去問・公式問題ではありません。予想問題であり，大学とは関係がありません。
本冊子は過去の出題形式を分析して作成した練習用の教材です。

I 評論（配点 35点）

次の文章は，睡眠と記憶の関係を論じた英文である。よく読んで，後の問1〜5に答えなさい。（配点 35点）

Students preparing for an important examination often treat sleep as a luxury they cannot afford. When there is too much to learn and too little time, shaving a few hours off the night seems like an easy way to gain extra time for study. The logic appears simple: time spent asleep is time not spent learning. Yet a growing body of research suggests that (1)this reasoning rests on a mistaken picture of how memory works. Sleep, it turns out, is not a pause in learning but one of its indispensable stages.

For a long time, sleep was thought of mainly as rest, a period in which the brain, like a fatigued muscle, simply recovered from the exertions of the day. We now know that the sleeping brain is far from idle. During certain stages of sleep, brain activity is in some respects as vigorous as it is during waking hours. Much of this activity appears to be devoted to processing what happened during the day: sifting through experiences, reinforcing some connections between nerve cells, and allowing others to wane.

A useful way to understand this is to think of memory as having at least two stages. When we first learn something, the new information is held in a fragile form that can easily be (a)disrupted by fresh experiences or simply dwindle away. To last, it must be stabilized and linked to what we already know, a process that scientists call consolidation*. Many researchers believe that a large part of consolidation takes place while we sleep, when the brain is no longer (b)flooded with new input from the senses and can turn its attention inward.

Evidence for this comes from a simple kind of experiment that has been replicated in many forms. Participants learn a list of words or a new skill, such as a sequence of finger movements, and are tested some hours later. Those who have slept in between generally perform better than those who have stayed awake for the same length of time. (A) the difference is not always large, it appears consistently, and in tasks involving movement, people sometimes do better after sleep than they did at the end of the original practice, as if the brain had continued to (c)rehearse without them.

Sleep also seems to do something more creative than storing memories exactly as they were. It appears to help the brain discern patterns and connections that were not obvious at first. People who are given a puzzle containing a hidden rule are more likely to uncover that rule after a night of sleep than after an equal period awake. In this sense, sleep may not only safeguard what we have learned but also help us understand it more (B).

None of this means that sleeping is a substitute for studying. The brain can only consolidate what it has taken in, and a good night of sleep after an afternoon spent watching videos will not produce a knowledge of chemistry. What the research does suggest is that study and sleep work in tandem. Information that is studied late at night but not followed by adequate sleep is less likely to be retained. (2)This means that the hours gained by staying awake may be paid for with the very learning they were meant to produce.

Fortunately, the practical lessons are far from elaborate. Distributing study over several days, rather than (C) it into one long session, gives the brain several nights in which to consolidate what has been learned. Keeping regular hours is beneficial, too, since the stages of sleep that matter most for memory are easily curtailed when we go to bed late or wake up early. Students who heed such advice may find that they remember more while spending fewer hours at their desks, a result that seems (d)paradoxical only if we still regard sleep as wasted time.

注　consolidation　（記憶の）定着
　　nerve cells　　神経細胞

問 1　下線部(1)の this reasoning が表す内容を，40字以内でまとめなさい（句読点も1字と数える）。

問 2　下線部(a)～(d)の語について，文脈に即した意味として最もふさわしいものを，それぞれの選択肢(あ)～(え)から一つ選び，記号で答えなさい。

(a) disrupted
(あ) recorded　(い) repeated　(う) disturbed　(え) organized

(b) flooded
(あ) supplied with water
(い) overwhelmed
(う) washed
(え) emptied

(c) rehearse
(あ) practice　(い) perform in public　(う) relax　(え) forget

(d) paradoxical
(あ) temporary　(い) obvious　(う) contradictory　(え) dangerous

問 3　本文中の(A)〜(C)を補うのに最もふさわしい語の組を，選択肢(あ)〜(え)から一つ選び，記号で答えなさい。

	(A)	(B)	(C)
(あ)	Although	deeply	cramming
(い)	Although	narrowly	dividing
(う)	Because	deeply	dividing
(え)	Unless	narrowly	cramming

問 4　下線部(2)を，This が指す内容を具体的に示して和訳しなさい。

問 5　本文の内容に一致するものを，選択肢(あ)〜(か)から二つ選び，記号で答えなさい。

(あ) According to the passage, the brain is almost completely inactive during sleep.
(い) New memories are fragile at first and need to be stabilized in order to last.
(う) The author claims that sleeping well can replace studying for an examination.
(え) A short nap after studying has been proven to be as effective as a full night of sleep.
(お) Sleep may help people notice rules or patterns that they did not see at first.
(か) People who stay awake after learning a skill usually perform better than those who sleep.

II 評論（配点 35点）

次の文章は，人の選択と「初期設定」の関係を論じた英文である。よく読んで，後の問1〜5に答えなさい。（配点 35点）

Imagine that you have just started a new job and are handed a sheaf of forms on your first morning. One of them asks whether you would like part of your salary to be placed in a savings plan for your retirement. If the form says that you will be enrolled unless you tick a box to opt out, you will probably remain in the plan. If it says that you will not be enrolled unless you tick a box to join, you will probably stay out. In both cases the choice is entirely yours, and ticking a box takes only a second. Yet the way the question is framed exerts a formidable influence on what most people end up doing.

An option that takes effect automatically when a person makes no active choice is known as a default*. Defaults are ubiquitous, determining the settings on a new phone, how large a coffee we are served if we do not ask for something different, and the plan we are placed on when we sign up for a service. Because they require nothing of us, we seldom notice them. Yet researchers who study decision-making have found again and again that (1)the option a person happens to be given at the start is often the one he or she ends up with, even when the stakes are high and changing it would be easy.

Why should something so minor have such (a)considerable influence? One reason is simple effort. Every decision, however small, requires some attention, and people tend to procrastinate on choices that seem convoluted or unpleasant. (A) a decision has been postponed, the default persists, sometimes for years. A second reason is that a default can be construed as advice. People often assume, not unreasonably, that whoever set up the default chose the option that most people would want. Accepting it therefore feels like the prudent thing to do.

A third reason concerns how we judge gains and losses. Once an option has been given to us, we tend to treat it as our starting point. Moving away from it then feels like forfeiting something, and people generally dislike losses more than they like gains of the same size. An employee who has been enrolled in a savings plan may feel that leaving it means losing money for the future, while an employee who has not been enrolled may feel that joining means losing part of today's salary. The facts are the same in both cases; only the starting point is (B).

(2)For these reasons, many governments and companies have begun to design defaults deliberately, hoping to steer people toward choices that serve their long-term interests. Proponents of this approach point out that someone has to decide what happens when people do nothing, and that since a truly neutral option rarely exists, a default should be chosen with

care rather than left to chance. And because people remain free to choose otherwise, no one is coerced into anything.

Critics, however, are less (C). They worry that the same techniques can be exploited to serve the interests of those who design them rather than those who are affected. A company might make a pricey subscription* the default, knowing that many customers will never get around to canceling it. Even well-intentioned defaults raise thorny questions. Who decides what is good for us? And if people end up with an option without ever thinking about it, can that option really be called their choice?

There is no simple answer to these questions, but one point is worth keeping in mind: defaults cannot be avoided, since every form, website, and contract has to start somewhere. The real question is therefore not whether our choices should be influenced, but by whom, for what purpose, and how (b)openly. A default that is clearly explained and easy to change respects people's autonomy in a way that a covert one does not. Perhaps the best safeguard is simply awareness: (D) we notice the defaults around us, we can ask whether they are really the options we would have chosen ourselves.

注　default　初期設定，既定値
　　subscription　定額制の契約（サービス）

問 1　下線部(1)を和訳しなさい。

問 2　空所(A)～(D)を補うのに最もふさわしい表現を，それぞれの選択肢(あ)～(え)から一つ選び，記号で答えなさい。

(A)
(あ) Before　(い) Although　(う) Unless　(え) Once

(B)
(あ) hidden　(い) different　(う) identical　(え) fixed

(C)
(あ) enthusiastic　(い) careful　(う) worried　(え) critical

(D)
(あ) although　(い) so that　(う) if　(え) unless

問 3　下線部(2)のように多くの政府や企業が初期設定を設計し始めたのはなぜか。その理由を，本文の内容に即して70字以内でまとめなさい（句読点も1字と数える）。

問 4　本文の内容に一致するものを，選択肢(あ)〜(か)から二つ選び，記号で答えなさい。

(あ) If a savings plan is the default, most new employees will probably stay in it.
(い) Companies are required by law to make the cheapest option the default.
(う) Supporters argue that, since a neutral option rarely exists, defaults should be chosen with care.
(え) The author concludes that all defaults should be banned in order to protect freedom.
(お) People rarely accept defaults because they distrust whoever designed them.
(か) Changing a default is usually difficult and takes a long time.

問 5　下線部(a)・(b)の語について，文脈に即した意味として最もふさわしいものを，それぞれの選択肢(あ)〜(え)から一つ選び，記号で答えなさい。

(a) <u>considerable</u>

(あ) visible　(い) kind　(う) thoughtful　(え) substantial

(b) <u>openly</u>

(あ) widely　(い) transparently　(う) frequently　(え) loudly

III 小説（配点 30点）

次の文章は，ある物語の一節である。語り手の Hazel と姉の Ruth は，亡くなった祖母が暮らしていた家を片づけに来ている。これを読んで，問1〜4に答えなさい。（配点 30点）

The house smelled the way it always had, of floor polish and old paper, but the silence was new. Grandma had lived here for fifty-one years, and in three weeks it would belong to a young couple from the city who planned to knock down the kitchen wall. My sister Ruth had driven up from London that morning with a car full of empty boxes and a typed list.

“Kitchen first,” she said, pinning the list to the fridge with a magnet shaped like a lemon. “Then the bedrooms. The attic on Sunday.”

“Good morning to you too,” I said.

She sighed. “(A). I’ve been on the road since six.”

We worked without talking for an hour. Ruth wrapped plates in newspaper with quick, exact movements, (a)the way she did everything. I kept stopping. Even the linoleum* by the sink had been worn into a pale path where she had stood for half a century. Every drawer held something: a ball of string, half a packet of birthday candles, a recipe card written in Grandma’s round, careful hand.

“Hazel, we’ll never finish if you read everything.”

“It’s her shortbread*. Look, she’s crossed out ‘two eggs’ and written ‘one.’”

“(B).” Ruth held out a black bin bag.

I put the card in my pocket instead.

Near lunchtime I found the tin. It was at the back of the top cupboard, behind a stack of cake trays nobody had used in years, and it was heavier than it looked. Inside were dozens of brittle, yellowed envelopes, all addressed to Grandma in the same narrow handwriting and tied in bundles with frayed kitchen string.

“Ruth.”

She looked over my shoulder and went still. “Those are from Grandpa,” she said. “From when he worked on the ships.”

“How do you know?”

“She showed me once. I was about ten. I’d broken her blue vase, and I was crying, and she sat me down at this table and read me one to cheer me up.” Ruth took a bundle and turned it over in her hands. “(C) until now.”

“You never told me.”

“(1)I didn’t think you’d care about that.” (b)She said it lightly, but she did not look at me.

“Of course I care. Why would you think I wouldn’t?”

“Because you left.” She put the bundle back in the tin. “You went to Canada, Hazel. For six years. I was the one who drove up every other weekend. I sorted out her pills and her bills and the man who came about the roof.”

“I phoned her every Sunday.”

“I know you did. But (D) as being here.”

I wanted to argue, to explain about the job and the flights and how every visit had felt too short to be worth the cost. Instead I looked at the envelopes. Grandma had kept every single one, for sixty years, through three house moves and a flood that had ruined half the furniture. She had not thrown away a word.

“I should have come home more,” I said.

For a long moment Ruth said nothing. Outside, a neighbor was mowing a lawn, and the sound rose and fell like breathing. Then she stood up, brushed the dust from her knees, took the list off the fridge, folded it in half, and put it in the drawer with the string and the candles. She sat down again and pushed the tin slowly across the table toward me.

“(E),” she said. “Read me one. (2)The attic can wait.”

注　linoleum　リノリウム（床材の一種）
　　shortbread　ショートブレッド（バターを多く使った焼き菓子）
　　bin bag　ごみ袋

問 1　空所(A)〜(E)を補うのに最もふさわしい発言を，選択肢(あ)〜(お)からそれぞれ一つ選び，記号で答えなさい。各選択肢は一回ずつ用いること。

(あ) I’d forgotten all about it
(い) Phoning isn’t the same thing
(う) Photograph it if you want
(え) Sorry, I’m just tired
(お) You keep them

問 2　下線部(1)を，that が指す内容を具体的に示して和訳しなさい。

問 3 波線部(a)・(b)の意味として最もふさわしいものを，それぞれの選択肢(あ)〜(え)から一つ選び，記号で答えなさい。

(a) the way she did everything

(あ) Ruth wrapped everything in the house in newspaper.
(い) Ruth did everything quickly and precisely.
(う) Ruth always did whatever Hazel told her to do.
(え) Ruth did everything more slowly than Hazel.

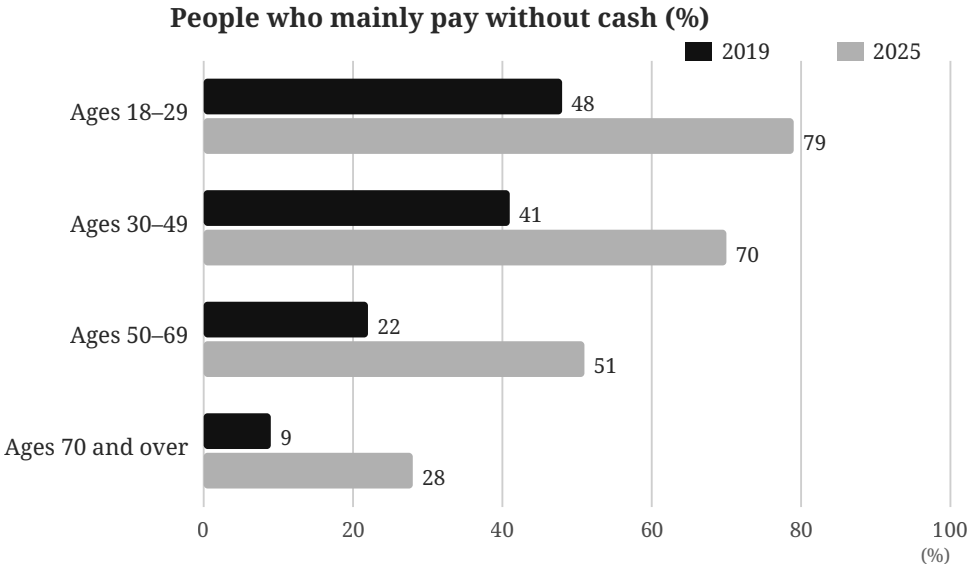

(b) She said it lightly, but she did not look at me.

(あ) She was too busy sorting the letters to look up at all.
(い) She was joking and did not mean what she said.
(う) She tried to sound casual, but she was actually hurt.
(え) She was so angry that she could not keep her voice down.

問 4 下線部(2)で Ruth が伝えようとしていることは何か。文字どおりの意味と，その裏にある意味を明らかにして，日本語で説明しなさい。

IV 英作文（配点 25点）

This graph presents the share of people in one country who mainly paid without cash for everyday shopping, by age group, in 2019 and in 2025. (The data are fictional.) Answer the questions below in English.（配点 25点）

(1) Select two of the four age groups and compare the changes in the share of people who mainly paid without cash between 2019 and 2025. Answer in English in about 40 words.

(2) Some people say that all shops should continue to accept cash, even as cashless payment spreads. Do you agree or disagree? Give reasons for your answer. Answer in English in about 60 words.
