予 想 問 題　第 3 回

**前 期 日 程　対 策**

# 英 語 問 題

**秋田大学（国際資源学部・教育文化学部・医学部保健学科・情報データ科学部 共通問題）の出題形式に準拠 ／ 問題**

**注　意**

1. 問題部分と解答用紙で構成されている（問題部分 1〜9ページ・解答用紙 10〜10ページ）。答えは解答用紙の決められた欄に書くこと。
2. 試験時間の目安は60分。大問は Ⅰ〜Ⅲ の3題。Ⅰ・Ⅱは英文の設問に記号 (A)〜(D) で答え，Ⅲは英語で1段落の文章を書く。
3. 配点は Ⅰ 70点・Ⅱ 70点・Ⅲ 60点（計200点）。本予想問題が独自に定めた配点である。
4. 本冊子の英文・設問はすべてオリジナルである。登場する人物・団体・地名は架空。

**秋田大学の過去問・公式問題ではありません。予想問題であり，大学とは関係がありません。**
**本冊子は過去の出題形式を分析して作成した練習用の教材です。**

## I 長文読解（配点 70点）

Study the article and respond to each question by choosing one of the four options. Write the letter of the option you choose.

### A Fridge on the Corner

**[1]** Outside a laundrette on a busy street in the town of Ashcombe stands an ordinary white refrigerator. It is not plugged in to sell drinks, and nobody guards it. A handwritten sign on the door explains the rules: anyone can leave food in it, and anyone can take food from it. Nobody has to give a name, fill in a form or explain why.

**[2]** The fridge was the idea of Priya Lowden, a nurse who often worked night shifts at the local hospital. Walking home at dawn, she noticed bakery staff putting unsold bread into bins, while a few streets away people queued outside a charity for free meals. “It seemed absurd,” she says. “The food and the people who needed it were only ten minutes apart, but nothing connected them.”

**[3]** Lowden borrowed the idea from similar projects she had read about in other countries, where they are often called community fridges. She persuaded the owner of the laundrette to provide electricity, found a second-hand fridge online and asked a few friends to help keep it clean. On the first day, she filled it herself with fruit, yoghurt and sandwiches. By the next morning, it was empty.

**[4]** Within a few months, the fridge had become part of daily life on the street. A greengrocer drops off vegetables that are slightly bruised but perfectly edible. Office workers leave the extra sandwiches from lunchtime meetings. Families who have bought too much before going on holiday bring what would otherwise go off while they are away. On a typical day, volunteers estimate that around forty people take something.

**[5]** Running the fridge requires more organisation than its simple appearance suggests. Volunteers check it twice a day, remove anything past its use-by date and wipe the shelves. They also keep a list of items the fridge does not take, such as raw meat, home-cooked dishes and opened packets, because these carry a higher risk of making people ill. Lowden says the rules are strict <u>for good reason</u>. “One case of food poisoning could close the whole project,” she explains.

**[6]** Who uses the fridge? The answer surprised the volunteers. They had expected mainly people with very low incomes, and many users do fall into that group. But others are students in the last days of the month, pensioners* who are careful with money, and workers who simply dislike seeing food wasted. Because nobody has to prove that they are poor, Lowden believes, people who would never visit a charity feel comfortable opening the door.

**[7]** That lack of checks is also what worries some critics. A local councillor* has asked whether a few people might take far more than their share, perhaps to sell it. Others argue that a fridge on the corner, however kind, cannot replace proper support for families who regularly cannot afford food. If the town relies on volunteers to fill the gap, they say, the deeper causes of the problem may be ignored.

**[8]** Lowden does not dismiss these points. She agrees that the fridge cannot cure poverty, and she says that the volunteers have seen very little evidence of people taking food to sell. When someone takes a large amount, she says, it is usually because they are collecting for neighbours or relatives who cannot leave their homes. “We decided early on to trust people,” she says. “If we start treating everyone as a suspect, we lose the thing that makes this work.”

**[9]** The project has had effects beyond the food itself. Several businesses that donate regularly say they now think more carefully about how much they order. The bakery that once threw away bread now sends its leftovers to the fridge every evening and has reduced its daily baking slightly. Some users have become volunteers themselves, and a small group meets each month to discuss how the project could be improved.

**[10]** Ashcombe now has three fridges, and the council has offered a small grant to cover electricity and cleaning materials. Lowden welcomes the support but hopes the fridges will remain a community effort rather than a council service. “What matters,” she says, “is that people see food as something to share, not something to throw away.”

pensioners　年金生活者
councillor　（地方議会の）議員

**問 1**　What do the rules on the door of the fridge say, as described in Paragraph [1]?

(A) Only people who give their names may take food.
(B) Anyone may put food in or take food out.
(C) Food may be taken only in the morning.
(D) People must explain why they need food.

**問 2**　Why did Priya Lowden think the situation was absurd, according to Paragraph [2]?

(A) The hospital served too much food to its night staff.
(B) The charity refused to give out free meals.
(C) Food was thrown away close to where people needed it.
(D) The bakery charged too much for its bread.

**問 3** Which of these steps is NOT described in Paragraph [3] as part of how Lowden started the fridge?

(A) getting the laundrette owner to supply electricity

(B) buying a used fridge online

(C) asking friends to help keep it clean

(D) asking the council for money to buy food

**問 4** What point is the writer making in Paragraph [4]?

(A) Many different people and shops now bring food to the fridge.

(B) The fridge is usually empty for most of the day.

(C) Only the greengrocer gives food regularly.

(D) People going on holiday are not allowed to use it.

**問 5** Which option is closest in sense to ***for good reason*** in Paragraph [5]?

(A) for no particular purpose

(B) because they are kind

(C) with a sensible justification

(D) for a brief period only

**問 6** What surprised the volunteers about the people who use the fridge, as explained in Paragraph [6]?

(A) Nobody with a low income used the fridge.

(B) The users included many kinds of people, not only the very poor.

(C) Most users were nurses from the hospital.

(D) Users had to prove that they were poor.

**問 7** In Paragraph [7], what do the critics mean when they warn that the town may rely on volunteers to ***fill the gap***?

(A) Volunteers might be asked to repair holes in the street.

(B) Volunteers might take too much food for themselves.

(C) The fridge might be moved to a larger space.

(D) Volunteers might end up doing what proper support should do.

**問 8** How does Lowden explain cases in which someone takes a large amount of food, according to Paragraph [8]?

(A) The person is usually collecting for others who cannot go out.

(B) The person usually plans to sell the food.

(C) The person is usually a volunteer checking the shelves.

(D) The person usually works for the council.

**問 9** Which effect of the project is mentioned in Paragraph [9]?

(A) The bakery has stopped baking bread altogether.

(B) Businesses have started to charge for their leftovers.

(C) Some donors now think more carefully about how much they order.

(D) Users are no longer allowed to become volunteers.

**問 10** Which statement is inconsistent with the article?

(A) Volunteers check the fridge twice a day.

(B) The fridge does not take home-cooked dishes.

(C) Lowden wants the fridges to become a service run by the council.

(D) There are now three fridges in Ashcombe.

## II 長文読解（配点 70点）

Study the article and respond to each question by choosing one of the four options. Write the letter of the option you choose.

### Laptops in the Hills

**[1]** For most of the last fifty years, the mountain town of Kestrel Ridge followed a familiar pattern. Young people finished school, took the bus down the valley and rarely came back. Shops closed one by one, the secondary school merged with another in the next town, and when the last decade closed, almost half the residents were over sixty-five.

**[2]** Then something unexpected happened. When large companies in the capital began allowing staff to work from home, a small number of those workers asked themselves why they were still paying high rents for tiny flats in the city. If their job could be done from a kitchen table, they reasoned, it could be done from a kitchen table with a view of the mountains. Over the following four years, around ninety households moved to Kestrel Ridge, most of them couples in their thirties.

**[3]** Tamsin Rowe, a software designer, was one of the first to arrive. She had visited the town on a walking holiday and remembered its quiet streets and clean air. “In the city, I spent nearly two hours a day on crowded trains,” she says. “Now my commute is the twenty steps from my bedroom to my desk, and I spend the time I have saved walking in the hills.” For Rowe, the move was less about saving money than about reclaiming the hours that travel had taken from her life.

**[4]** The newcomers have brought visible changes. A café that had been closed for years reopened, partly because it offered fast internet and space for people to work. The primary school, which had been at risk of closing, now has enough pupils to keep all its classes. A local builder says he has more work than he can handle, renovating old farmhouses that had stood empty since their owners died.

**[5]** Yet the arrival of the newcomers has not been entirely smooth. House prices in the town have risen by more than a third, which is good news for those selling property but bad news for young local people hoping to buy their first home. Some long-term residents also complain that newcomers treat the town like a holiday resort. “They love the scenery,” one farmer says, “but some of them have not once attended a town meeting, and they don’t understand why we need to clear the snow from the roads together in winter.”

**[6]** There are practical difficulties, too. The town’s internet connection, which was improved by the regional government only a few years ago, can still become slow in the evenings when many people are online at once. Medical care is limited: the nearest hospital is

forty minutes away by car, which matters a great deal to families with small children. And in heavy snow, the road down the valley is sometimes closed for a day or more, leaving residents cut off from every other part of the country.

**[7]** Local leaders have tried to help the two groups understand each other. The town council now holds a welcome evening twice a year, at which newcomers meet long-term residents and learn about local customs, from the rules for sorting rubbish to the summer festival. Some newcomers have joined the volunteer fire brigade, and a few long-term residents have started taking computer classes taught by people who moved from the city.

**[8]** Researchers who study rural areas say Kestrel Ridge shows both the promise and the limits of remote work. Remote workers can bring money and energy to struggling places, they say, but only some kinds of work can be done from home, and those jobs are often held by people who are already well paid. Most local residents work in farming, care homes or tourism, and these jobs cannot be done through a screen. The danger, the researchers warn, is that towns like Kestrel Ridge could become divided between newcomers with city salaries and locals whose incomes have not changed.

**[9]** Another question is whether the newcomers will stay. Some companies have begun asking employees to return to the office for part of the week, and a few families have already moved back to the city. Rowe admits that she cannot be sure what her employer will decide. “If they ask me to come in three days a week, I will have to think very hard,” she says. “But I would rather change jobs than give up this life.”

**[10]** For the town’s mayor, the arrival of newcomers is a chance that must not be wasted. She believes the key is seeing that the benefits reach everyone, for example by building affordable homes for young local families and by using new tax income to improve the road and the clinic. “Ten years ago, people were asking whether Kestrel Ridge would still exist in thirty years,” she says. “Now they are asking what kind of town it should become. That is a much better question to have.”

**問 1** What does Paragraph [1] tell us about Kestrel Ridge before the recent change?

(A) Its population was growing quickly.

(B) Many young people left and the population grew older.

(C) A new secondary school had just opened.

(D) Most residents were in their thirties.

**問 2** Why did some city workers decide to move to Kestrel Ridge, as explained in Paragraph [2]?

(A) Their companies opened offices in the town.

(B) They lost their jobs in the capital.

(C) They could do their work from home, so city life was no longer necessary for them.

(D) The town offered them free houses.

**問 3** Which option is closest in sense to ***reclaiming*** in Paragraph [3]?

(A) getting back

(B) counting up

(C) giving away

(D) complaining about

**問 4** Which of these changes is NOT described in Paragraph [4]?

(A) A café that had been closed opened again.

(B) The primary school now has enough pupils.

(C) A builder has plenty of work repairing old farmhouses.

(D) A new hospital was built in the town centre.

**問 5** According to Paragraph [5], who has been hurt by rising house prices?

(A) people who are selling property

(B) young local people hoping to buy their first home

(C) newcomers who rent flats in the city

(D) farmers who clear the snow

**問 6** What does ***cut off*** mean in Paragraph [6]?

(A) made shorter

(B) connected by internet

(C) unable to reach other places

(D) forced to pay more

**問 7** What have local leaders done to help the two groups, as described in Paragraph [7]?

(A) They hold welcome evenings where newcomers meet long-term residents.

(B) They have banned newcomers from town meetings.

(C) They have stopped the summer festival.

(D) They require all residents to take computer classes.

**問 8** What risk do the researchers warn about in Paragraph [8]?

(A) Remote workers might stop paying taxes.

(B) The town might split between newcomers with high incomes and locals.

(C) Farming jobs might move to the city.

(D) Tourists might stop visiting the town.

**問 9** How does Tamsin Rowe feel about the possibility of returning to the office, according to Paragraph [9]?

(A) She is looking forward to working in the city again.

(B) She has already agreed to come in three days a week.

(C) She is sure her company will never ask her to return.

(D) She would prefer to find another job than leave her new life.

**問 10** Which statement is inconsistent with the article?

(A) About ninety households moved to the town over four years.

(B) The internet connection can be slow in the evenings.

(C) The mayor thinks the new tax income should be saved, not spent.

(D) Some families have already moved back to the city.

## III 自由英作文（配点 60点）

Opinions differ on where young people should build their lives. Some think a large city offers more chances, while others would rather live in a small town or the countryside.

Which would you choose to live in after you finish your education, a large city or a small town? Explain your choice with two reasons. Write a single paragraph in English of approximately 120 words in the box on the answer form.
