英 語 問 題

北海道大学（全学部共通）の出題形式に準拠 ／ 問題

注　意

1. 問題部分と解答用紙で構成されている（問題部分 1〜11ページ・解答用紙 12〜13ページ）。答えは解答用紙の決められた欄に書くこと。
2. 試験時間の目安は90分。大問は 1〜4 の4題。
3. 配点は 1 42点・2 42点・3 42点・4 24点（計150点）。本予想問題が独自に定めた配点である。
4. 本冊子の英文・設問はすべてオリジナルである。登場する人物・団体・地名は架空。

北海道大学の過去問・公式問題ではありません。予想問題であり，大学とは関係がありません。
本冊子は過去の出題形式を分析して作成した練習用の教材です。

1　長文読解（配点 42点）

以下の英文を読み，後の問いに答えなさい。

Not long ago, a teacher I know asked her class of sixteen-year-olds to write a short letter by hand to someone they admired. Several students hesitated before they began, and one boy admitted that he could not remember the last time he had written more than a few lines without a keyboard. His remark was not unusual. In many countries, people now type, tap, and swipe far more often than they hold a pen, and handwriting has quietly moved from the center of daily life to its edges. This shift raises a question that might once have seemed strange: what, if anything, do we lose when we stop writing by hand?

One common answer is that nothing important is lost at all. According to this view, handwriting is simply a tool, like a typewriter or a fax machine, and tools are replaced when better ones appear. Typing is faster for most adults, typed text is easier to read, and a document stored on a computer can be searched, copied, and shared in seconds. (1)If the purpose of writing is to put words in a form that others can use, it is hard to see why anyone should spend years training a hand to do slowly what a machine does quickly and well.

Yet people who teach writing often notice something that this practical argument leaves out. When students take notes by hand, they cannot record every word a speaker says, so they are forced to (ア). They must decide what matters, put it in their own words, and connect it to what they already know. A laptop, by contrast, lets a student copy a lecture almost word for word without thinking very hard about its meaning. The slowness of the pen may therefore be less a weakness than a hidden advantage, because it obliges the writer to process ideas rather than merely store them.

There is also the matter of memory and attention. Forming letters by hand involves a series of small, deliberate movements, and many teachers believe that this physical effort helps fix words and ideas in the mind. Typing, in comparison, requires much the same simple motion for every letter, and it is easily interrupted by messages, alerts, and the temptation to open another window. (2)A sheet of paper, however, offers no such distractions; it waits patiently for whatever the writer decides to put on it. For people who find it difficult to concentrate in front of a screen, this quietness can be surprisingly valuable.

Handwriting carries personal meaning as well. A typed message looks much the same whoever sends it, but a handwritten note shows the writer’s hand in a very literal sense: the pressure of the pen, the shape of the letters, even the places where a word was crossed out and written again. Many people keep letters from relatives or old friends long after they have deleted thousands of emails. (3)This happens not because the handwritten words are wiser, but

because they seem to preserve a trace of the person who wrote them, a sign that someone took time and care to communicate.

None of this means that schools should abandon keyboards or that adults should feel guilty about typing. Digital tools have made writing available to people who once struggled with it, including those for whom holding a pen is painful, and they allow us to revise and share our work in ways earlier generations could not have imagined. The real question is not which method is better in every situation, but which method suits a particular purpose. A shopping list, a business report, and a diary entry make different (イ) on the writer, and there is no reason the same tool should serve all of them equally well.

Perhaps the most sensible approach, then, is to think of handwriting not as an old habit to be defended or discarded, but as one skill among several that a thoughtful writer can choose to use. Someone who can type quickly and also write clearly by hand has more options than someone who can do only one. The teacher who asked her students to write letters found that, once they had overcome their initial reluctance, most of them enjoyed the task, and several said they intended to send their letters by post. Their experience suggests that the pen has lost not its power so much as its place, and that its place may yet be found again.

問 1　下線部(1)を和訳せよ。

問 2　(ア)を補うのにふさわしいものを，(A)〜(D)のうちから一つ選べ。

(A) write as quickly as they possibly can
(B) select and summarize what they hear
(C) rely on the speaker’s own slides
(D) stop listening for a while

問 3　下線部(2)の言わんとすることに最も近いものを，(A)〜(D)のうちから一つ選べ。

(A) Paper is more patient than any reader of the text.
(B) Writing on paper takes more time than writing on a screen.
(C) Paper does not compete with the writer for attention.
(D) Paper is less convenient because it cannot send messages.

問 4　文頭の This が指す内容を具体的に示しつつ，下線部(3)を和訳せよ。

問 5　(イ)を補うのにふさわしい語を，(A)〜(D)のうちから一つ選べ。

(A) promises
(B) mistakes
(C) excuses
(D) demands

問 6　本文の趣旨に合致する英文を，(A)〜(F)のうちから二つ選べ。

(A) The teacher found that all of her students refused to write letters by hand at first.

(B) In the author's view, the slowness of writing by hand can help learners think about what they are recording.

(C) The author argues that schools should stop teaching typing and return to the pen.

(D) The author expects handwriting to vanish completely from everyday life before long.

(E) According to the passage, handwritten letters are often kept because they seem to carry something of the writer.

(F) Typed messages are described as more personal than handwritten ones because they are easier to read.

2　長文読解（配点 42点）

以下の英文を読み，後の問いに答えなさい。

The winter I turned twenty-four, I moved to Brannock Bay, a fishing town of about two thousand people on a rocky northern coast, to work as an assistant at the town's only veterinary clinic. I had grown up in a large city where I rarely spoke to my neighbors, and I assumed that life in a small town would be much the same, only quieter. For the first few weeks, it was. I went to work in the dark, came home in the dark, and spent my evenings reading or watching films on my laptop. I nodded to the people I passed on the street, but none of them were really acquaintances of mine, nor did I feel the lack.

That changed in early February, when a storm arrived from the sea and stayed for three days. On the first night, the wind brought down the power lines along the coast road, and the whole town lost electricity. My apartment was heated by an electric radiator, and by morning I could see my breath in the air. My phone battery was almost empty, the shops were closed, and the road out of town was blocked by fallen trees. (1)I remember standing at my window, wrapped in every sweater I owned, and realizing, as never before, how completely my comfortable life depended on systems I had never once thought about.

Around noon there was a knock at the door. It was Edda Lindqvist, the elderly woman who lived in the apartment below mine and whom I had greeted perhaps twice. She told me that several neighbors were gathering at the community hall, which had an old wood-burning stove, and that I should bring any food I had. When I arrived, I found about forty people there. Someone had brought a gas burner and was making soup in an enormous pot; a group of teenagers was collecting firewood; two fishermen were checking on people who lived alone. Nobody seemed to be in charge, and yet everyone seemed to know (ア).

Over the next two days, I learned more about my neighbors than I had in the previous two months. The man who ran the hardware store turned out to have been a nurse for twenty years. A shy girl from the high school organized a rota so that the oldest residents were never left without someone to talk to. Edda herself, who I had imagined spent her days alone in front of the television, had lived through a far worse storm as a child and calmly told stories about it to the younger children until they fell asleep. (2)What struck me most was that none of this felt like charity. People were not helping out of pity or a sense of duty, but because, in a town this size, the well-being of one household was obviously tied to the well-being of all the others.

I was able to contribute something, too. On the second morning, a farmer arrived with a sheepdog that had cut its leg badly on a broken fence. With the clinic closed and the vet stuck on the other side of the blocked road, I cleaned and bandaged the wound by the light of a camping

lantern while several children watched in silence. It was a small thing, and I was nervous throughout, but afterwards people I had never spoken to greeted me by name. It was the first moment since my arrival when I felt that I was not simply living in Brannock Bay but belonged to it.

When the power came back on the third evening, there was a cheer in the hall, followed by a strange moment of hesitation, as if nobody quite wanted to go home. Life soon returned to normal, but it was not quite the same normal. People who had shared soup by candlelight continued to stop and talk in the street. Edda began inviting me for tea on Sundays, and I began shoveling the snow from her steps without being asked. I began to realize that (3)this town had ways of looking after its members that no official system could fully replace: the habit of checking on someone whose curtains stayed closed too long, the unspoken rule that whoever had a working car gave lifts to anyone without one, the pot of soup that appeared whenever someone was ill.

I have since moved back to the city, and I still live in a building where most people keep to themselves. I do not believe that small towns are always better places to live; they can be lonely in their own way, and privacy is harder to find. (4)But that storm taught me that independence is partly an illusion, one that is easy to maintain only as long as the lights stay on. These days I make a point of learning my neighbors' names. It is a modest habit, but I now believe the strength of a community is built in ordinary moments like these, long before anyone needs it.

問 1　下線部(1)を和訳せよ。

問 2　(ア)を補うのにふさわしいものを，(A)〜(D)のうちから一つ選べ。

(A) what needed to be done
(B) when the power would return
(C) who had caused the damage
(D) how to leave the town

問 3　筆者が下線部(2)のように感じた理由を，本文に即して説明せよ。句読点も1字に数え，50字以内とする。

問 4　下線部(3)の具体例にあたる語句を，本文から二つ抜き出して英語で記せ。

問 5　one の指す内容を明らかにしながら，下線部(4)を和訳せよ。

問 6　本文の趣旨に合致する英文を，(A)〜(F)のうちから二つ選べ。

(A) The author moved to Brannock Bay mainly to escape the noise of city life.

(B) Before the storm, the author had little real contact with the people nearby.

(C) Edda Lindqvist organized a rota so that the oldest residents always had company.

(D) The author treated an injured dog even though the clinic was closed.

(E) Soon after the power returned, the townspeople forgot what they had shared.

(F) The author now believes that small towns are always better places to live than cities.

3　英文読解・英語での解答（配点 42点）

Read the passage below.

In many cities across the globe, public drinking fountains were once a familiar sight. Built in parks, squares, and railway stations, they offered clean water to anyone who was thirsty, free of charge. Over the past several decades, however, a large number of them have disappeared. Some were removed because they were expensive to maintain, and others were simply left broken until they were taken away. Meanwhile, bottled water became widely available in shops and vending machines, and many people came to assume that drinking water in public was something one paid for.

Concerns about hygiene also played a part. Many people grew uneasy about putting their mouths close to a tap that strangers had used, and fountains that were not cleaned regularly did little to change their minds. Once a fountain looked dirty, people stopped using it, and once it was rarely used, local authorities had even less reason to repair it. Thus a useful public service slowly faded from many streets without much discussion.

Recently, though, public fountains have begun to make a comeback. One reason is the growing concern about plastic waste. Every bottle of water that is bought, emptied, and thrown away adds to a problem that cities and oceans are struggling to cope with. If people can refill their own bottles for free, they have less need to buy new ones. Another reason is health. As summers grow hotter in many regions, easy access to water can help prevent heatstroke, especially among children, older people, and those who work outdoors. For people who cannot easily afford to buy drinks, a free fountain may be the only convenient source of water while they are away from home.

Modern fountains are also designed differently. Many now include a separate tap for filling bottles, so users need not touch the spout with their mouths. Some towns have begun publishing maps that show where fountains can be found, and certain shops and cafés have agreed to refill visitors' bottles without asking them to buy anything.

Not everyone is convinced. Installing and cleaning fountains costs money, and some people worry that they will be damaged or misused. Shops that sell drinks may also see them as unfair competition. Whether public fountains will become common again may depend on whether residents see free water as a basic public service, like streetlights or benches, or as a product that should be bought and sold.

Respond to Questions A–C in English. Ideas and vocabulary from the passage may be used, but whole sentences should not be reproduced.

Question A

Fill in the blanks to finish the sentence below.

The first two paragraphs suggest that many public fountains disappeared partly because _____ , and partly because people became worried about _____ .

Question B

Fill in the blanks to finish the sentence below.

The third paragraph explains that supporters of public fountains believe that they can reduce _____ and protect people's health by _____ .

Question C

Some people say that their city should install more public drinking fountains, even if this means a small rise in local taxes. Do you agree? Give your view and the reasons for it, using between 70 and 100 words.

4　会話文と要約文（配点 24点）

Read the conversation [I] between two university students, Mei and Daichi, and then the summary of it [II]. The summary has 12 blanks. Fill each blank with the most suitable word from the box; no word may be used more than once. Mark your answers by giving the letter of each chosen word.

[I : Conversation]

Daichi: Mei, do you have a minute? I need some advice about something I've been thinking about for a while.

Mei: Sure, I've got plenty of time before my next class. What's going on? You look as if something has been bothering you all morning.

Daichi: I've been thinking about getting a dog. There's an animal shelter near the station, and I've been looking at their website every night for a week.

Mei: That's exciting! But you live in a small apartment near the campus, don't you? Are pets even allowed in a building like that?

Daichi: That was my first question too. I checked with the landlord yesterday, and small dogs are fine as long as I pay a little extra rent.

Mei: Well, that's one problem solved, then. Have you found a particular dog that you like, or are you still just looking at the photos?

Daichi: There's a four-year-old mixed breed called Biscuit. The staff said she was found wandering near the river last spring. She's docile and affectionate, but she gets nervous around strangers.

Mei: Why not get a puppy instead? If you started with a very young dog, you could train it exactly the way you wanted from the beginning.

Daichi: I thought about that, but puppies demand constant attention, and I'm in lectures most of the day. An adult dog that's already calm might fit my timetable better. Besides, older dogs often wait much longer to find a home.

Mei: That's a kind way of looking at it. But be honest with yourself, Daichi. A dog isn't like a plant you can water once a week. Who'll take care of her when you have exams, or when you go home during the holidays?

Daichi: My sister lives about twenty minutes away, and she's offered to help. She grew up with dogs, so she knows what she's doing.

Mei: OK. What about money, though? Food, vaccinations, and regular trips to the vet add up much more quickly than people expect, and if she gets seriously sick, the bills can be huge.

Daichi: I know. I've drawn up a rough budget, and I think I can manage if I cut back on eating out. The shelter also said they'd pay for her first check-up.

Mei: You've clearly done your homework. I'm a little surprised, to be honest. Last year you couldn't even keep a goldfish alive!

Daichi: Don’t remind me. That’s exactly why I want to be careful this time. I’d hate to make a decision I’ll regret, and I’m determined not to take her home and then send her back.

Mei: That’s the right attitude. Can you spend time with her before deciding? Some shelters let you take a dog for a walk first.

Daichi: Yes, they encourage it. I’m going on Saturday to walk her around the park. If she seems comfortable with me, I might try having her for a weekend.

Mei: That sounds sensible. Would you like me to come along with you on Saturday? I’m certainly no expert, but another pair of eyes might help you notice things you would otherwise miss.

Daichi: Actually, that would be great. You’re much better than I am at noticing small details, especially about how animals are feeling.

Mei: I’ll take that as a compliment. One last point, though: don’t decide only because she looks sad in the photos. Think about whether your daily life really has room for her.

Daichi: You’re right. I’ll write down my weekly schedule tonight and see where the walks would fit.

Mei: Good idea. And if it doesn’t work out with Biscuit, that’s perfectly fine too. It’s always better to wait for the right dog than to rush into something you can’t handle.

Daichi: Thanks, Mei. I feel a lot clearer about the whole thing now than I did when we started talking.

[II : Summary]

Daichi asks his friend Mei for advice because he is (1) adopting a dog from an animal shelter near the station. Mei first wonders whether animals are (2) in his apartment, but Daichi explains that his landlord has consented, provided that he pays slightly higher rent.

The dog Daichi likes is a gentle four-year-old mongrel called Biscuit, although strangers tend to cause her (3). Mei suggests that a puppy might be easier to train, but Daichi feels that an adult dog would better (4) his hectic days at university. He also notes that older dogs usually have to wait longer before someone offers them a permanent home.

Mei then asks who will look after the dog during exams and holidays. Daichi replies that his sister, who is (5) with dogs, has volunteered to help. Mei also reminds him that the (6) of food, vaccinations, and veterinary treatment can mount up rapidly. Daichi says he has drawn up a budget and intends to spend (7) money on eating out. Mei is surprised at how thoroughly Daichi has (8), since he once failed to keep even a goldfish alive.

Daichi says that this embarrassing episode is the reason he wants to act with (9) now, because he is anxious to avoid returning the dog to the shelter after taking her home. He plans to walk Biscuit in the park on Saturday and may then foster her for a weekend. Mei offers to accompany him so that he can hear a second (10).

Finally, Mei advises Daichi not to make his choice simply out of (11) for a dog that looks mournful in photographs. Instead, he should reflect carefully on whether his everyday routine genuinely has room for her. Daichi decides to write down his weekly schedule, and he feels much less (12) than he did when the conversation began.

(A) admired	(B) anxiety	(C) beneath
(D) caution	(E) confused	(F) considering
(G) costs	(H) delay	(J) familiar
(K) frequently	(L) humor	(M) ignored
(N) less	(P) opinion	(Q) permitted
(R) prepared	(S) rarely	(T) suit
(U) sympathy	(V) wealthy	(W) weather

注）記号 (I) と (O) は数字と紛らわしいため使っていない。
