注　意

1. 問題部分と解答用紙で構成されている（問題部分 1〜11ページ・解答用紙 12〜13ページ）。答えは解答用紙の決められた欄に書くこと。
2. 試験時間の目安は90分。大問は 1〜4 の4題。
3. 配点は 1 42点・2 42点・3 42点・4 24点（計150点）。本予想問題が独自に定めた配点である。
4. 本冊子の英文・設問はすべてオリジナルである。登場する人物・団体・地名は架空。

北海道大学の過去問・公式問題ではありません。予想問題であり，大学とは関係がありません。
本冊子は過去の出題形式を分析して作成した練習用の教材です。

1　長文読解（配点 42点）

以下の英文を読み，後の問いに答えなさい。

Not so long ago, finding your way around an unfamiliar city demanded some ingenuity. Travelers studied paper maps before setting out, asked strangers for directions, and memorized the names of streets and landmarks. Mistakes were common, and getting lost was an inevitable part of exploring a new place. Today, most of us carry a device that can tell us, at every moment, exactly where we are and which way to turn. The arrow on the screen moves as we move, a soothing voice announces each corner in advance, and the possibility of losing our way seems to have almost disappeared.

There is much to be grateful for in this change. Navigation apps save time, alleviate stress, and make it possible for people who would once have stayed at home to travel with confidence. A visitor who speaks none of the local language can reach a hotel at midnight without asking anyone for help. (1)For people with poor eyesight or a weak sense of direction, being guided step by step can make the difference between feeling trapped in a small familiar area and feeling free to explore.

Yet something may be lost when every journey is planned for us. When we follow instructions from a screen, our attention tends to rest on the next turn rather than on the place as a whole. We arrive at our destination, but we often could not explain how we got there, and if the battery died on the way back, we might have little idea which direction to take. (2)We reach places, so to speak, without really getting to know them. Someone who has found the way by reading street signs, noticing a bakery on one corner and a church tower in the distance, builds up a kind of mental picture that someone who has simply obeyed an arrow does not.

This mental picture matters for more than convenience. Knowing how the parts of a town fit together allows us to find shortcuts, to devise alternative routes when a road is closed, and to give directions to others. It also shapes how we feel about where we live. (　ア　), a neighborhood that we have explored on foot, taking wrong turns and discovering unexpected streets, tends to feel more like our own than one we have only passed through while staring at a phone. (3)Getting lost is not always a failure; it can be the moment when a place stops being a set of instructions and starts becoming somewhere we actually know.

Children may be particularly affected. In many places, young people now travel less independently than earlier generations did, partly because anxious parents fret about traffic and partly because a phone allows constant contact. When they do go out alone, they are often guided by the same apps that adults use. Some teachers and parents have begun to ask whether children are missing the chance to develop a sense of direction, along with the self-reliance that

comes from solving small problems by themselves, such as working out which bus to take or what to do after missing a stop.

None of this means that we should throw away our phones or refuse to use maps on a screen. A sensible approach might be to treat navigation apps as a backup rather than as a constant guide. (4)We could look at the route before leaving, try to remember the main turns, and check the screen only when we are genuinely unsure, so that the device supports our own judgment instead of replacing it. On a free afternoon, we might even leave the phone in a pocket and simply roam, accepting that we may take longer to reach our goal.

The point is not that the old ways were always better. Paper maps could be bewildering, and asking for directions did not always produce helpful answers. But the effort of finding our own way gave us something that is easy to overlook: a relationship with the places we passed through. Technology has made it far easier to arrive. It is worth making sure that, in the process, we do not forget how to look around.

問 1　下線部(1)を和訳せよ。

問 2　下線部(2)の言わんとすることに最も近いものを，(A)〜(D)のうちから一つ選べ。

(A) We arrive at our destinations but learn little about the areas we pass through.
(B) We can no longer reach the places that we want to visit.
(C) We visit fewer places than people did in the past.
(D) We become familiar with new places more quickly than before.

問 3　(ア)を補うのにふさわしいものを，(A)〜(D)のうちから一つ選べ。

(A) Nevertheless
(B) For instance
(C) In contrast
(D) As a result

問 4　下線部(3)で筆者は「道に迷うこと」をどのようなものと考えているか。句読点も1字に数え，70字以内で説明せよ。

問 5　下線部(4)を和訳せよ。

問 6　本文の趣旨に合致する英文を，(A)〜(F)のうちから二つ選べ。

(A) Navigation apps, the passage says, have allowed some people to travel with more confidence.

(B) The author argues that paper maps were always clearer than navigation apps.

(C) People guided by a screen usually concentrate on the next turn rather than on the whole place.

(D) The author reports research proving that children who use apps have a worse sense of direction.

(E) In the author’s opinion, travelers should stop carrying phones when they go abroad.

(F) Knowing a town well is described as useful only for finding shortcuts.

2　長文読解（配点 42点）

以下の英文を読み，後の問いに答えなさい。

I was thirty-two years old when I finally admitted that I could not swim. It was not a secret, exactly, but it was something I had avoided mentioning for most of my life. As a child, I had been terrified by a towering wave on a family holiday, and after that I refused to go into any water deeper than my knees. At school, I always found an excuse to miss swimming lessons. As an adult, I simply arranged my life so that the subject never came up. I chose holidays in cities rather than at the beach, and when friends suggested a day by the lake, I volunteered to guard the bags.

What changed my mind was my niece. When she turned six, my sister asked if I would take her to the local pool on Saturday mornings while she worked. (1)I could hardly explain to a six-year-old that her aunt, who had promised to keep her safe, would be of no use at all if she got into difficulty in the water. That evening, I searched online and found an adult beginners' class at the Merriwick community pool. It met on Tuesday nights, it was taught by a former competitive swimmer named Rosalind Achterberg, and, according to the website, no previous experience was required.

There were six of us in the class: a retired bus driver, two university students, a nurse who had grown up far from the sea, a man who had recently moved to the country, and me. I had expected to feel embarrassed, but there was an unexpected solace in being surrounded by people who were equally (ア). Rosalind began not by teaching us any strokes but by asking each of us to describe what frightened us. For me, it was the moment my face went under the surface and I could no longer breathe. For the bus driver, it was the feeling of not touching the bottom. She listened carefully and said that fear was nothing to be ashamed of; it was simply information about what we needed to practise.

For the first three weeks, we did not swim at all. We stood in the shallow end, put our faces in the water, and blew bubbles. We practised floating on our backs while Rosalind held a hand under our shoulders. (2)It felt ridiculous at first, but I gradually noticed that the panic I had always felt was becoming quieter, as if my body were slowly learning what my mind had refused to believe for years: that the water would hold me up if I let it. One evening, Rosalind quietly took her hand away, and I floated on my own for several seconds before realizing she was no longer supporting me.

Progress after that was uneven. Some weeks I seemed to move forward; other weeks I swallowed water, lost my rhythm, and went home discouraged. The students, who were younger and stronger, soon left the rest of us behind. Rosalind, however, refused to let us compare

ourselves with one another. (3)She told us that the only useful comparison was with the person we had been the week before. When I lamented that I would never be a proper swimmer, she asked what I meant by ‘proper’. I realized I had none. Winning races had never been my aim. My wish was simply to stay calm in deep water, and that, I slowly understood, was already within reach.

When the course finished, I could swim a full length of the pool, slowly and not very gracefully, but without stopping. It was twenty-five meters, a distance my niece would later cover in half the time. Still, I remember climbing out at the deep end that night and sitting on the edge with my feet in the water, feeling a kind of pride I had not felt since childhood. The retired bus driver, who had reached the same point a week earlier, shook my hand as if I had crossed an ocean.

I now take my niece to the pool every Saturday, and I am usually the one who suggests staying longer. Looking back, I am struck by how much of my fear had been kept alive by avoidance. (4)Each time I had turned away from the water, I had made it a little more frightening, so that what began as a single bad experience became, over many years, a fixed part of how I saw myself. The lesson I took from Rosalind’s class was not really about swimming. It was that some fears do not diminish until we approach them, slowly, alongside others who are willing to wait.

問 1　下線部(1)を和訳せよ。

問 2　(ア)を補うのにふさわしい語を，(A)〜(D)のうちから一つ選べ。

(A) competitive
(B) impatient
(C) inexperienced
(D) skilled

問 3　下線部(2)で筆者に起きていた変化を，本文に即して説明せよ。句読点も1字に数え，60字以内とする。

問 4　下線部(3)の言わんとすることに最も近いものを，(A)〜(D)のうちから一つ選べ。

(A) Each swimmer should try to match the pace of the fastest person in the class.
(B) Comparing oneself with anyone at all is always harmful to learning.
(C) Each swimmer would be tested once a week to measure progress.
(D) Each swimmer should judge progress against his or her own earlier performance.

問 5　第2段落から，Rosalind Achterberg がどのような経歴の人物かを表す語句を4語で抜き出して英語で記せ。

問 6　it が何を指すかを明らかにして，下線部(4)を和訳せよ。

問 7　本文の趣旨に合致する英文を，(A)〜(F)のうちから二つ選べ。

(A) The author used to avoid swimming lessons when she was at school.

(B) The author joined the class mainly because a doctor had advised her to exercise.

(C) Rosalind taught the class basic swimming strokes in the very first lesson.

(D) The two university students made faster progress than the others in the class.

(E) The author eventually swam twenty-five meters faster than her niece.

(F) The author now prefers not to stay long at the pool with her niece.

3　英文読解・英語での解答（配点 42点）

Read the passage below.

In a number of cities, local governments have started to close parts of their central districts to cars for one day each month, or sometimes every Sunday. On these car-free days, streets that are normally filled with traffic are opened to pedestrians, cyclists, and street performers. Families bring children to play in the road, cafés put tables outside, and residents who rarely visit the center come to walk around and see what has changed.

Supporters say the benefits are easy to see. The air becomes noticeably cleaner, the noise of engines disappears, and people move more slowly, stopping to talk or look into shop windows. Many shop owners in pedestrian areas say that they welcome more customers on these days, since people who are walking are more likely to notice a small business than drivers passing by. For children, a street without cars offers a rare chance to run freely in the middle of the city.

Others are less enthusiastic. Delivery companies complain that closing roads makes it harder to bring goods to shops and homes, and some residents who depend on their cars, such as older people or those with heavy work equipment, find it inconvenient to reach the center. Shop owners on streets that remain open to traffic sometimes worry that customers will be drawn away to the car-free area. There are also costs for the city, which must arrange barriers, signs, and staff to direct traffic.

Some cities have responded by making exceptions. Buses, taxis for people with disabilities, and emergency vehicles are usually allowed to pass, and deliveries may be permitted before the shops open. A few cities have gone further, turning car-free days into permanent pedestrian streets after residents became used to them. Elsewhere, the experiment has been quietly ended after complaints.

Whether such schemes succeed seems to depend less on the idea itself than on how carefully it is planned and explained. When residents are consulted beforehand and the needs of different groups are taken into account, car-free days tend to be regarded not as a restriction but as a chance to rediscover the city.

Respond to Questions A–C in English. Ideas and vocabulary from the passage may be used, but whole sentences should not be reproduced.

Question A

Fill in the blanks to finish the sentence below.

The second paragraph explains that supporters of car-free days point to advantages like _____ , while shop owners in pedestrian areas often see _____ .

Question B

Fill in the blanks to finish the sentence below.

The third paragraph indicates that opponents are concerned that delivery companies will find it difficult to _____ , and that residents who rely on their cars may _____ .

Question C

Some people think that the center of their city should be closed to private cars permanently. Do you agree? Give your view and the reasons for it, using between 70 and 100 words.

4　会話文と要約文（配点 24点）

Read the conversation [I] between two university students, Haruka and Sota, and then the summary of it [II]. The summary has 12 blanks. Fill each blank with the most suitable word from the box; no word may be used more than once. Mark your answers by giving the letter of each chosen word.

[I : Conversation]

Sota: Haruka, you look exhausted. Did you stay up late again?

Haruka: Sort of. I was up until two finishing a report, and then I couldn't fall asleep, so I ended up scrolling through videos on my phone until nearly four.

Sota: Four? That's brutal. How many hours of sleep do you usually get during the week?

Haruka: Honestly, maybe five on a good night. I tell myself I'll catch up at the weekend, but then I sleep until noon on Saturday and feel even more sluggish afterwards.

Sota: I used to be exactly the same. In my first year, I thought sleeping less was a sign that I was working hard. I was almost proud of how tired I was.

Haruka: And now you're not? You always seem so energetic in our morning seminar.

Sota: That's because I changed my routine last spring. I kept nodding off in lectures, and I failed a statistics test that I'd actually studied for. That was a wake-up call, if you'll forgive the expression.

Haruka: Very funny. So what did you change?

Sota: The biggest thing was setting a fixed time to go to bed and get up, even at the weekend. At first it felt rigid and a bit boring, but after a few weeks my body seemed to adjust, and I started waking up before my alarm.

Haruka: Even at the weekend? That sounds impossible for me. Saturday mornings are the only time I can really relax.

Sota: I don't mean you can never have a lie-in. But if the difference between weekdays and weekends is huge, it's a bit like flying to another time zone every Friday night and flying back on Sunday.

Haruka: Hmm, I've never thought of it like that. What about the phone, though? Lying in bed watching videos is the one stretch of the day that feels like my own time.

Sota: I understand that completely. What helped me was leaving my phone charging on the desk across the room. If I want to check it, I have to get up, and usually I can't be bothered.

Haruka: That's clever, in a slightly sneaky way. But don't you miss messages from friends?

Sota: Occasionally, but nobody has ever been offended because I replied in the morning instead of at midnight. Most people are relieved, actually, because it means they don't feel obliged to answer straight away either.

Haruka: I suppose that's true. Still, my problem is partly the amount of work. If I go to bed at midnight, I won't finish my assignments.

Sota: Maybe, but are you sure you're working efficiently at one in the morning? When I was exhausted, I'd read the same paragraph four or five times without taking anything in.

Haruka: Okay, you've got me there. Last night I spent half an hour rewriting one sentence, and this morning I couldn't understand what I'd been trying to say.

Sota: Exactly. These days I do the most demanding tasks in the morning, when my head is clear, and save simple things like checking references for the evening.

Haruka: I'm not convinced I could become a morning person overnight, but maybe I could try going to bed an hour earlier for a couple of weeks and see whether it makes any difference.

Sota: That's a sensible way to start. Small changes are much easier to maintain than a complete transformation.

Haruka: And I'll leave the phone on my desk. If I start complaining that I'm bored in bed, you're not allowed to say I told you so.

Sota: Deal. But I might ask you in a fortnight whether you've stopped falling asleep in the seminar.

[II : Summary]

Sota notices that Haruka looks (1), and she admits that she stayed awake until almost four in the morning, first finishing a report and then watching videos on her phone. She usually gets only about five hours of sleep on weekdays and tries to make up for this by sleeping late at the weekend, which actually leaves her feeling even more lethargic.

Sota confesses that he used to have similar habits and even regarded a lack of sleep as (2) of diligence. However, after repeatedly dozing off in lectures and failing a test he had prepared for, he decided to (3) his routine. The most important change was to go to bed and wake up at a (4) time every day. Although this seemed monotonous at first, his body gradually got used to it.

Haruka doubts that she could follow the same schedule, because Saturday mornings are her only chance to unwind. Sota explains that a large gap between weekdays and weekends is (5) to travelling across time zones twice a week. Haruka also mentions that watching videos in bed is the only time she feels is truly her own. Sota recommends keeping the phone on the other side of the room, so that checking it requires (6).

When Haruka asks whether he worries about missing messages, Sota replies that his friends have never been (7) by a delayed reply, and that many of them seem (8) not to feel pressure to respond immediately. Haruka then argues that she needs to stay up late because of her (9), but Sota questions whether she can concentrate properly in the middle of the night. Haruka (10) that she wasted half an hour on a single sentence the previous night.

Sota explains that he now tackles difficult work in the morning and leaves easier tasks for the evening. Although Haruka is (11) that she can change completely, she decides to go to bed an hour earlier for two weeks as an experiment, since modest changes are easier to (12) than a total transformation. She also agrees to leave her phone on her desk.

(A) abandon	(B) admits	(C) comparable
(D) confident	(E) doubtful	(F) effort
(G) evidence	(H) exhausted	(J) fixed
