神戸大学 前期日程 対策 ／ 問題

注意　解答はすべて解答用紙の指定のところに記入しなさい。

外国語（英　語）　　125点

注意

1. この冊子は問題部分と解答用紙からなる。解答はすべて解答用紙の指定のところに記入しなさい。
2. 大問は I〜IV の4題，配点は I 35点・II 35点・III 30点・IV 25点（計125点）。
3. 字数指定のある日本語の解答では，句読点も1字に数える。
4. 本冊子の英文・設問・図表はすべてオリジナルで，IV の図表のデータは架空のものである。

神戸大学の過去問・公式問題ではありません。予想問題であり，大学とは関係がありません。
本冊子は過去の出題形式を分析して作成した練習用の教材です。

I 評論（配点 35点）

次の文章は，日常の「ゆるやかな人間関係」を論じた英文である。よく読んで，後の問1〜5に答えなさい。（配点 35点）

Most of us, when asked who matters most in our lives, would name a small circle of people: family members, a partner, perhaps two or three close friends. These are the people we turn to in a crisis, and it seems natural to presume that our well-being depends almost entirely on them. Yet a typical day is replete with a very different kind of contact. We exchange a few words with the barista who makes our coffee, nod to a neighbor walking her dog, or chat briefly with a classmate we hardly know while waiting for a lecture to begin. Such encounters are so fleeting and so mundane that we seldom reflect on them at all.

Sociologists have long distinguished between “strong ties,” the deep relationships we sustain with a few people, and “weak ties,” the looser connections we have with acquaintances. At first glance, the second category hardly seems worth taking seriously. Weak ties involve little emotional investment or mutual obligation, and they can dissolve without much sense of loss. However, there are compelling reasons to think that (1)this view underestimates them. Acquaintances enrich our lives in ways that close friends often cannot.

The first reason concerns information: the people closest to us tend to move in the same circles that we do. They read the same news, visit the same places, and know many of the same people. As a result, what they can tell us is often what we already know. Acquaintances, by contrast, belong to other networks. A former teammate who now works in a different industry, or a neighbor who grew up in another country, can (a)open a window onto a world we would otherwise never glimpse. It is frequently through such people, rather than through our best friends, that we first hear of a job opening, a useful book, or an unfamiliar way of looking at a problem.

A second reason is emotional: many of us think of a conversation with a stranger as something to be (b)endured rather than enjoyed. Asked in advance, people often anticipate that talking to someone they do not know will be awkward and that the other person will have little interest in them. Yet when they actually begin such a conversation, they frequently find it more pleasant than they had expected. (A) people misjudge how such conversations will go, they shun them, and so they never discover that their fears were (c)exaggerated.

Weak ties also shape the neighborhoods where we spend our days. A neighborhood where residents recognize one another, even if they know little more than each other’s faces, feels different from one where everyone is a stranger. Such a neighborhood requires no deep friendships, only repeated, low-cost contact: the same faces at the same shop, the same greetings

on the same street. In this sense, a community is built not only from strong bonds but also from countless slender threads, each one weak on its own but (B) when woven together.

Why, then, do we neglect these relationships? Part of the answer lies in the way modern life is organized. Online shopping, self-service checkouts*, and headphones worn in public spaces all make it easier to get through a day without speaking to anyone. Each of these conveniences saves a little time or effort, and few people would willingly relinquish them. Taken together, however, they remove many of the small opportunities for contact that once arose naturally. (2)This is not a problem that anyone designed; it is a side effect of choices that each made sense on its own.

None of this means that close relationships are unimportant. A friend who listens during a difficult time cannot be replaced by a friendly shop assistant. The point is rather that the two kinds of relationship do different jobs, and that a life built entirely around a few strong ties may be (C) than it appears. Fortunately, weak ties are cheap to create. Asking a classmate how a test went, thanking a bus driver, or pausing for a moment to talk with a neighbor costs almost nothing. Such gestures may seem (d)trivial, but they are the raw material* from which a sense of belonging is made.

注　self-service checkouts　セルフレジ
　　raw material　原料

問 1　下線部(1)の this view が表す内容を，40字以内でまとめなさい（句読点も1字と数える）。

問 2　下線部(a)～(d)の語句について，文脈に即した意味として最もふさわしいものを，それぞれの選択肢(あ)～(え)から一つ選び，記号で答えなさい。

(a) open a window onto
(あ) let fresh air into　(い) protect us from　(う) give us a view of　(え) shut us out of

(b) endured
(あ) looked forward to　(い) put up with　(う) put off　(え) made up for

(c) exaggerated
(あ) overstated　(い) hidden　(う) shared　(え) justified

(d) trivial
(あ) unpleasant　(い) unnatural　(う) unusual　(え) unimportant

問 3　本文中の(A)～(C)を補うのに最もふさわしい語の組を，選択肢(あ)～(え)から一つ選び，記号で答えなさい。

	(A)	(B)	(C)
(あ)	Although	fragile	richer
(い)	Because	fragile	poorer
(う)	Because	strong	poorer
(え)	Unless	strong	richer

問 4　下線部(2)を，This が指す内容を具体的に示して和訳しなさい。

問 5　本文の内容に一致するものを，選択肢(あ)～(か)から二つ選び，記号で答えなさい。

(あ) The author argues that close friendships should be replaced with a wide network of acquaintances.

(い) Because weak ties take a great deal of time to build, most people can maintain only a few of them.

(う) Close friends are often less useful than acquaintances as sources of new information because they share many of our experiences.

(え) Online shopping and self-service checkouts were introduced in order to reduce contact between people.

(お) Most people enjoy conversations with strangers less than they had predicted beforehand.

(か) According to the author, a neighborhood can feel different even if its residents know hardly anything about one another except their faces.

II 評論（配点 35点）

次の文章は，都市の暑さとその対策を論じた英文である。よく読んで，後の問1〜5に答えなさい。（配点 35点）

On a sweltering summer afternoon, anyone who walks from a sunny parking lot into a park shaded by tall trees can feel the difference. This everyday experience points to a phenomenon that has become a serious concern for city planners around the world: the urban heat island. Cities tend to be warmer than the countryside that encircles them, and the difference is often greatest not in the middle of the day but after sunset.

Several causes interact to produce this effect. The first is the material from which cities are built. Asphalt roads and concrete buildings, with their dark and dense surfaces, absorb a large share of the sunlight that falls on them and store its energy as heat during the day. At night, when the countryside cools quickly, these surfaces slowly release the heat they have stored, keeping the surrounding air warm. The shape of a city matters as well: tall buildings clustered together trap heat between them and obstruct the wind that might otherwise carry it away. Finally, cities generate heat of their own. Cars, factories, and the air conditioners that people switch on to escape the heat release warm air into the streets, so that (1)the very machines we use to keep ourselves cool end up making the city outside even hotter.

The consequences are more than a matter of comfort. High temperatures at night make it difficult for the human body to recover from the heat of the day, and older people and those with health problems are especially susceptible during prolonged hot spells. Hotter cities also consume more electricity for cooling, which can (a)strain power supplies at exactly the moment when demand is highest. (A), as the climate warms, heat waves are expected to become more frequent, so the extra heat that cities produce is likely to become more dangerous, not less.

Among the possible responses, trees have attracted particular attention. A tree cools its surroundings in two distinct ways. The more obvious is shade: by blocking sunlight before it reaches the ground, a tree keeps roads, walls, and people from heating up in the first place. The second is less visible. Trees draw water from the soil through their roots and release it as vapor through microscopic openings in their leaves, a process known as transpiration*. Turning liquid water into vapor requires energy, and this energy is taken from the surrounding air, which therefore becomes cooler. A large tree thus works like a natural air conditioner, one that runs on water rather than electricity and (B) no waste heat at all.

Yet planting trees is not as simple as it sounds. A tree needs space for its roots, which in a congested city must compete with water pipes, electric cables, and the foundations of buildings. It also needs water, and in a dry summer the water that a tree needs may itself be scarce. Young

trees take many years to grow large enough to provide meaningful shade, and those planted in narrow, paved streets often wither long before they reach that size. (2)For these reasons, some cities have begun to treat their trees not as decoration but as infrastructure*, planning, funding, and caring for them with the same seriousness they give to roads and drains.

Trees are not the only tool available. Roofs and pavements can be painted in light colors so that they reflect sunlight instead of absorbing it, and roofs can be covered with soil and plants. Each of these measures has its own costs and drawbacks, and none of them is enough on its own. (C), the most effective approach is usually to combine several of them, choosing those that suit the climate and shape of a particular city.

What makes the urban heat island unusual among environmental problems is that both its causes and its solutions are largely local. A single city cannot stop global warming by itself, but it can decide what its streets are made of, how its buildings are arranged, and where its trees are planted. In this sense, the extra heat that cities suffer from is heat of their own making, and that is (b)precisely why (D) is within their reach.

注　transpiration　蒸散（植物が葉から水分を水蒸気として放出すること）
　　infrastructure　社会基盤（道路・上下水道など）

問 1　下線部(1)を和訳しなさい。

問 2　空所(A)～(D)を補うのに最もふさわしい表現を，それぞれの選択肢(あ)～(え)から一つ選び，記号で答えなさい。

(A)
（あ）Moreover　（い）Instead　（う）Otherwise　（え）Nevertheless

(B)
（あ）absorbs　（い）produces　（う）receives　（え）blocks

(C)
（あ）For example　（い）At first　（う）In contrast　（え）For this reason

(D)
（あ）reducing it
（い）ignoring it
（う）leaving the city
（え）stopping global warming

問 3　下線部(2)のように一部の都市が樹木を扱い始めたのはなぜか。その理由を，本文の内容に即して70字以内でまとめなさい（句読点も1字と数える）。

問 4　本文の内容に一致するものを，選択肢(あ)〜(か)から二つ選び，記号で答えなさい。

(あ) In most cities, the temperature difference between the city and the countryside is greatest around noon.

(い) Roads and buildings in cities take in heat while the sun is up and give it off after dark.

(う) Painting roofs in light colors has been shown to cool cities more effectively than planting trees.

(え) According to the passage, trees cool the air only by blocking sunlight.

(お) The author believes that cities can stop global warming if they plant enough trees.

(か) Hot nights are dangerous partly because they make it hard for people to recover from the heat of the day.

問 5　下線部(a)・(b)の語について，文脈に即した意味として最もふさわしいものを，それぞれの選択肢(あ)〜(え)から一つ選び，記号で答えなさい。

(a) <u>strain</u>

(あ) replace　(い) overload　(う) protect　(え) measure

(b) <u>precisely</u>

(あ) partly　(い) hardly　(う) exactly　(え) carefully

III 小説（配点 30点）

次の文章は，ある物語の一節である。語り手の Daniel は大学に進まず，近所のパン屋で働いている。これを読んで，問1〜4に答えなさい。（配点 30点）

The bakery closed at two on Saturdays, and by the time I had finished scrubbing the trays and hung up my flour-dusted apron, my father's car was already waiting outside. I could see him through the window, drumming his fingers on the wheel, as if he might have to drive away at any moment.

"You're late," he said when I got in.

"Five minutes."

"Seven." He started the engine. "Your mother wants us home by three. Your aunt's coming."

For a while neither of us spoke. The radio was playing something with violins, and he turned it down, then up again, then off. I knew that habit. It meant he was trying to find the beginning of a sentence.

"Mr. Patel* says you're doing well," he said at last.

"You talked to Mr. Patel?"

"I bought bread. (A)."

"Dad, you don't even like rye bread*."

"I like it fine." He kept his eyes on the road, squinting a little. "He says you're the first one in every morning."

"The ovens have to be on by five, and somebody has to knead the first batch of dough."

"That's not what he meant."

I looked out at the gray houses sliding past. Four months earlier, the letter had come from the university — his university, the one whose name was still printed on the mug he drank his coffee from every morning. I had read it standing in the hall, and then I had folded it very small and put it in my pocket, as though that would change what it said. When I finally showed it to him, he had read it twice and said only, "Well." Then he had gone out to the garage and stayed there until dinner.

"I've been thinking," he said now. "There's still time to apply again for next year. (B). You could take a course in the evenings, improve your grades in —"

"I won't apply again."

He slowed down for a light that had not yet turned red. "(1)<u>You don't mean that.</u>"

"I do. I like the bakery. I like getting up when it's dark and having something to show for it by noon. (C)."

"It's a job, Danny. It's not a future."

“Mr. Patel has been doing it for thirty years. (a)Is that not a future?”

The light changed. He didn’t move until the car behind us sounded its horn.

“That’s different,” he said.

“Why?”

He didn’t answer, and I wished I hadn’t asked. We turned onto our street. The Hendersons’ terrier was barking at nothing, as it always did, and someone had left a child’s bicycle lying on its side across the pavement.

He parked but did not switch off the engine. “When I was your age,” he began, then stopped. “No. (D).”

“Go on,” I mumbled.

“When I was your age, my father worked in a factory. Every night he came home with burns on his arms. He told me I’d never have to do work like that. He said it like it was a gift.” He looked down at his hands. “I suppose I’ve been trying to give you the same gift.”

I didn’t know what to say. (b)I had always thought of his disappointment as something aimed at me, and it had never occurred to me that it might have come from somewhere much older.

“It’s a good gift,” I said finally. “I just don’t think it’s the one I want.”

For a long time he said nothing. Then he reached into the back seat and handed me a paper bag. Inside was a loaf of rye bread, its crust still slightly warm.

“(2)I’ll learn to like it,” he said. “(E).”

注　Mr. Patel　語り手が働くパン屋の店主
　　rye bread　ライ麦パン

問 1　空所(A)～(E)を補うのに最もふさわしい発言を，選択肢(あ)～(お)からそれぞれ一つ選び，記号で答えなさい。各選択肢は一回ずつ用いること。

(あ) Give me time
(い) I’m good at it, too
(う) It doesn’t matter
(え) Plenty of people apply twice
(お) We got talking

問 2　下線部(1)を，that が指す内容を具体的に示して和訳しなさい。

問 3 波線部(a)・(b)の意味として最もふさわしいものを，それぞれの選択肢(あ)〜(え)から一つ選び，記号で答えなさい。

(a) Is that not a future?

(あ) Mr. Patel will not have a future if he keeps working at the bakery.

(い) I am not at all sure that I myself have any future there.

(う) Mr. Patel should look for a job with a better future.

(え) Mr. Patel's thirty years of work are themselves a kind of future.

(b) I had always thought of his disappointment as something aimed at me

(あ) I had believed that his disappointment would soon disappear.

(い) I had believed that he was hiding his disappointment from me.

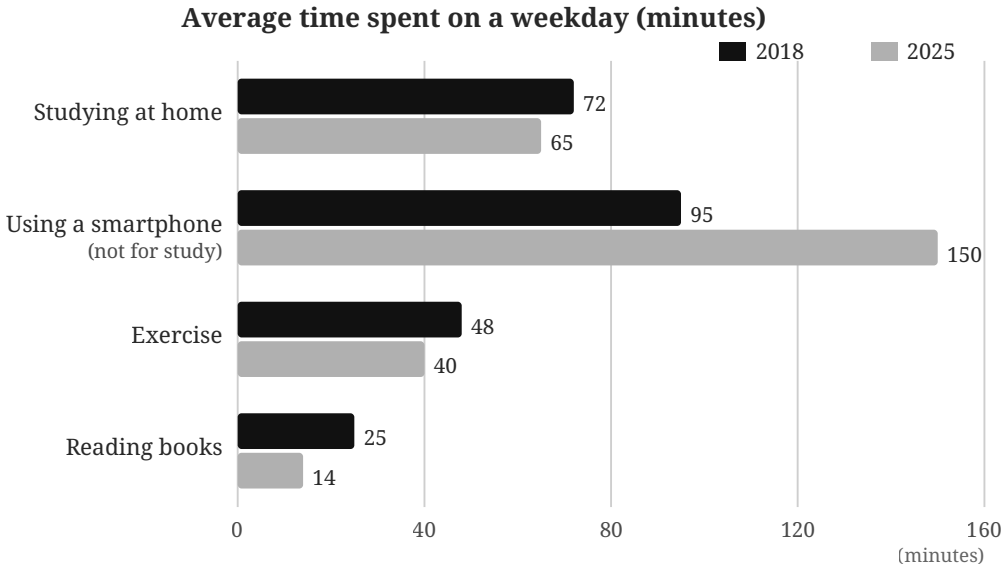

(う) I had believed that he wanted me to aim higher than he had.

(え) I had believed that he was disappointed in me personally.

問 4 下線部(2)で父親が伝えようとしていることは何か。it が文字どおりに指すものと，その裏にある意味を明らかにして，日本語で説明しなさい。

IV 英作文（配点 25点）

This graph presents the average time that high school students in one city spent on four activities on a weekday in 2018 and in 2025. (The data are fictional.) Answer the questions below in English.（配点 25点）

(1) Select two of the four activities and compare the changes in the time spent on them between 2018 and 2025. Answer in English in about 40 words.

(2) Some people say that schools should collect students' smartphones during the school day. Do you agree or disagree? Give reasons for your answer. Answer in English in about 60 words.
