予 想 問 題　第 1 回

前 期 日 程　対 策

英 語 問 題

大阪大学（外国語学部以外）の出題形式に準拠 ／ 問題

注　意

1. 問題部分と解答用紙で構成されている（問題部分 1〜8ページ・解答用紙 9〜10ページ）。答えは解答用紙の決められた欄に書くこと。
2. 試験時間の目安は90分（文学部の志願者は105分）。大問は I〜IV の4題。
3. IV(B)は，**文学部志望なら(イ)**，**それ以外の学部志望なら(ロ)**に答えること。
4. 配点は I 30点・II 50点・III 30点・IV 40点（計150点）。本予想問題が独自に定めた配点である。
5. 本冊子の英文・日本文・設問はすべてオリジナルである。

大阪大学の過去問・公式問題ではありません。予想問題であり，大学とは関係がありません。
本冊子は過去の出題形式を分析して作成した練習用の教材です。

I 英文和訳（配点 30点）

英文(A)・(B)の下線部を，それぞれ和訳しなさい。

(A) Every world map is, in a sense, a compromise. A globe cannot be flattened onto paper without being stretched or torn somewhere, so mapmakers must decide which features to preserve and which to distort. A map that keeps the shapes of coastlines accurate will exaggerate the size of regions far from the equator, while one that shows areas correctly will bend the outlines of continents. None of these choices is wrong, but each reflects a judgment about what the map is for, and the reader who forgets this may mistake a convenient picture for the world itself.

(B) In many conversations, a pause of more than a second or two can feel uncomfortable, and speakers often rush to fill it with whatever comes to mind. Yet silence is not simply the absence of communication. Depending on the setting and the relationship between the speakers, a pause may signal respect, careful thought, disagreement, or a sense of closeness so complete that words have become unnecessary. Learning to read these silences, and to tolerate them rather than fear them, is part of what it means to understand another person, and perhaps another culture as well.

II 長文読解（配点 50点）

英文を読み，後の設問(1)〜(6)に答えなさい。

Why Repair Matters

A generation ago, when a radio stopped working or a jacket tore at the seam, the natural response was to have it fixed. Today, the same problem is more likely to end with a trip to the shop for a replacement. Repairing an object has come to seem quaint, even slightly eccentric, as if tinkering were a hobby for people with too much time on their hands. Yet a growing number of designers, economists, and ordinary citizens argue that (1)the decline of repair is neither natural nor inevitable, and that reversing it could change the way we relate to the things we own.

Part of the explanation is simple arithmetic. As factories have become more efficient, the price of many manufactured goods has fallen, while the cost of skilled labor has risen. When a new toaster costs less than an hour of a technician's time, it is hardly surprising that people choose to replace rather than repair. But price is not the whole story. Many products are now designed in ways that make repair (i)cumbersome or impossible. Parts are fastened with adhesive rather than screwed together, batteries are sealed inside cases, and special tools are required to disassemble even the simplest device. Manuals that once explained how a machine worked have largely vanished, leaving its workings inscrutable to its owner, and spare parts, if they exist at all, may be restricted to authorized dealers.

Critics have a name for the most extreme version of this practice: planned obsolescence*, the deliberate design of products so that they will fail or become obsolete after a limited period. Manufacturers usually reject the charge, and in many cases the reality is more complicated. A phone may be sealed to make it thinner or more resistant to water, qualities that customers say they want. (A)The difficulty of repair is often a side effect of such choices rather than their purpose. Whatever the motive, however, the result for the consumer is the same: an object that cannot be fixed must eventually be discarded.

The costs of this pattern are not only financial. Discarded electronic devices are among the fastest-growing kinds of waste in the world. They contain valuable metals that are difficult to salvage, as well as substances that can contaminate soil and water if they are not handled properly. Moreover, for many products, much of the environmental damage occurs before they ever reach the consumer, during the extraction and smelting of raw materials and the manufacturing process. Seen in this light, the most effective way to reduce the impact of an object is often simply to prolong its lifespan. To throw away a working phone is, in effect, to squander the energy and materials already invested in it.

In response, a movement has emerged to make repair easier. In many cities, volunteers now organize “repair cafés,” informal events at which people bring broken lamps, bicycles, or clothes and learn to mend them with the help of more experienced neighbors. Meanwhile, campaigners have (ii)pressed governments to adopt what is often called a “right to repair”: rules requiring manufacturers to make spare parts, tools, and information available to independent repairers and to the public. Some governments have already begun to move in this direction.

Supporters of the movement emphasize that repair is not merely a technical activity. (2)To open a machine and understand how it works is to stop treating it as a mysterious box and to begin seeing it as something that human beings designed and can therefore change. People who learn the painstaking work of repair often describe a fresh form of attention to the objects around them: they notice how things are made, which materials are used, and why some designs are more durable than others. In this sense, repair can (iii)foster a relationship with objects that is closer to care than to consumption.

It would be (iv)naive, however, to imagine that repair can solve every problem. Some modern devices are so intricate that fixing them requires expertise few people will ever have, and an old appliance may use far more energy than a newer model, so that keeping it in service is not always the greener choice. (B)Repair is a means, not an end in itself. The aim is not to preserve every object forever but to make the decision to replace something (3)a real choice rather than the only option available.

Perhaps the deepest change that the repair movement asks for concerns not laws or products but expectations. For most of human history, frugality was a necessity: objects were expected to last, and a tool or a coat might be handed down from one generation to the next. Mass production made goods cheap enough to be treated as (v)disposable, and with that came a habit of thinking of them as temporary. (C)Restoring the habit of repair would mean accepting that some things are worth the trouble of keeping, and that the trouble itself may have a value we have forgotten. The question, in the end, is less what we can afford to buy than what we can bear to throw away.

注　planned obsolescence　計画的陳腐化

設問(1)　下線部(i)〜(v)の語がこの文章で表している意味として，最もふさわしいものを(イ)〜(ニ)からそれぞれ1つ選び，記号で答えなさい。

(i) cumbersome

(イ) awkward　(ロ) needless　(ハ) unsafe　(ニ) unlawful

(ii) pressed

(イ) ignored　(ロ) urged　(ハ) flattened　(ニ) thanked

(iii) foster

(イ) conceal　(ロ) imitate　(ハ) nurture　(ニ) terminate

(iv) naive

(イ) natural　(ロ) dishonest　(ハ) generous　(ニ) unrealistic

(v) disposable

(イ) throwaway　(ロ) available　(ハ) expensive　(ニ) fragile

設問(2)　下線部(A)〜(C)について英語で問う。それぞれの問いに対する答えとしてふさわしいものを(イ)〜(ニ)から1つずつ選び，記号で答えなさい。

(A) The difficulty of repair is often a side effect of such choices rather than their purpose.

What does the author suggest by this sentence?

(イ) Manufacturers always design products to break quickly so that customers will buy new ones.

(ロ) Features that customers value, such as thinness, can make products harder to repair even when that is not the aim.

(ハ) Customers prefer products that are hard to repair because such products look more modern.

(ニ) Products that are resistant to water are usually easier to repair than other products.

(B) Repair is a means, not an end in itself.

Which statement best captures this idea?

(イ) Repair should be left to experts, because ordinary people lack the necessary skills.

(ロ) Repair will eventually come to an end as devices become more complex.

(ハ) Repair is valuable when it serves wider goals such as reducing waste, so repairing is not always the right decision.

(ニ) Repair is the most important goal of environmental policy.

(C) Restoring the habit of repair would mean accepting that some things are worth the trouble of keeping

According to the final paragraph, what change does the repair movement ultimately call for?

(イ) A return to the methods of production used before mass production.

(ロ) New laws that ban the sale of disposable products.

(ハ) Lower prices for new products, so that everyone can afford them.

(ニ) A change in how people think about how long things should last and what they are worth.

設問(3)　下線部(1)のように言える根拠を，第2・第3段落に基づいて45字以内でまとめなさい（句読点も1字と数える）。

設問(4)　下線部(2)を，内容がよく伝わるように和訳しなさい。

設問(5)　下線部(3) a real choice rather than the only option available とはどういうことか。本文に基づき，英語40〜50語程度でまとめなさい。

設問(6)　本文の内容に一致するものを(イ)〜(ヘ)の中から2つ選んで，その記号を書きなさい（順序は問わない）。

（イ）製品の価格が下がり人件費が上がったことは，修理より買い替えが選ばれる理由の一つである。

（ロ）メーカーの多くは，製品が早く壊れるように意図して設計していることを認めている。

（ハ）製品が環境に与える害の多くは，消費者が使っている間に生じる。

（ニ）「修理する権利」とは，部品や工具，情報を独立した修理業者や一般の人々にも利用できるようにすることを求める考え方である。

（ホ）筆者は，古い家電はどれもできるだけ長く使い続けるべきだと主張している。

（ヘ）リペアカフェでは，専門の業者が料金を取って壊れた製品を修理している。

III　自由英作文（配点 30点）

高校を卒業してすぐに大学へ進むのではなく，1年ほどの期間を仕事やボランティア活動，旅行などにあてる「ギャップイヤー」を取る人がいます。ギャップイヤーを取ることの是非を，利点か問題点のどちらか1つに絞って論じなさい。自分なりの具体例を必ず含め，英語80語程度で書くこと。

IV　和文英訳（配点 40点）

日本文(A)・(B)の下線部を英訳しなさい。(B)は，文学部を志望する人は(イ)，それ以外の学部を志望する人は(ロ)に答えること（本予想問題では，志望と異なる側を選んだ答案は採点しない扱いとする）。

(A)（全員）

何かを「知っている」ことと「わかっている」ことは，似ているようでずいぶん違う。ある出来事が起きた年を答えられても，なぜそれが起きたのかを説明できなければ，その出来事をわかっているとは言いにくい。知識は外から手に入れることができるが，理解は自分の頭の中で知識どうしを結びつけたときに，はじめて生まれる。だから，人から聞いた答えをそのまま覚えるよりも，遠回りに見えても自分で考えてみるほうが，結局は深く身につくのである。

(B)

(イ)（文学部志望）

子どものころに住んでいた町を久しぶりに訪ねると，景色よりも先に，においや音が記憶を呼び覚ますことがある。夕方になると決まって漂ってきた魚を焼くにおいや，遠くの踏切の音を耳にしたとたん，忘れていたはずの光景が驚くほど鮮やかによみがえる。記憶とは，引き出しにしまわれた写真というより，ふとしたきっかけで目を覚ます眠りのようなものなのかもしれない。

(ロ)（文学部以外の学部志望）

科学の論文には，測定した値とともに，その値がどの程度確かなのかを示す「誤差」が書き添えられている。誤差を示すことは，研究の弱点をさらけ出すことのように思えるかもしれない。しかし実際には，どこまでが確かで，どこからが不確かなのかをはっきりさせることこそが，ほかの研究者が結果を検証し，さらに先へ進むための土台となるのである。

解答用紙　予想問題 第1回

受験番号・氏名欄は省略。記号は (イ) のように書く。
