予 想 問 題　第 3 回

前 期 日 程　対 策

英 語 問 題

東北大学（全学部共通）の出題形式に準拠 ／ 問題

注　意

1. 問題部分と解答用紙で構成されている（問題部分 1〜10ページ・解答用紙 11〜12ページ）。答えは解答用紙の決められた欄に書くこと。
2. 試験時間の目安は100分。大問はⅠ〜Ⅳの4題。
3. 配点は Ⅰ 60点・Ⅱ 50点・Ⅲ 40点・Ⅳ 50点（計200点）。本予想問題が独自に定めた配点である。
4. 本冊子の英文・日本文・設問はすべてオリジナルである。登場する人物・団体・地名は架空。

東北大学の過去問・公式問題ではありません。予想問題であり，大学とは関係がありません。
本冊子は過去の出題形式を分析して作成した練習用の教材です。

I 長文読解（配点 60点）

以下の英文を読み，後の問いに答えなさい。

Ask people what they remember about a city they have visited, and most will describe what they saw: tall buildings, crowded markets, a famous bridge at sunset. Far fewer mention what they heard, although sound shapes our experience of a place (ア)at least as much as sight does. Traffic, construction work, sirens, air-conditioning units and music drifting out of shops combine into a constant background that most residents eventually stop noticing. Yet our failure to notice a sound any longer is no proof that it leaves us untouched. (1)The body, it seems, goes on listening long after the mind has stopped paying attention.

Throughout most of the human past, the loudest sounds people heard were natural ones: thunder, waterfalls, the roar of a storm at sea. Human activity added bells, hammers and the clatter of carts on stone streets, but these sounds rose and fell with the rhythm of the working day, and night was, for the most part, quiet. The arrival of engines changed this (イ)more dramatically than any earlier invention. Railways, factories and later motor vehicles produced noise that was not only louder but also continuous, and as cities grew, the hours of genuine quiet (ウ)became fewer and fewer. Today, in many large cities, there is no time of the night when the hum of traffic disappears completely. Many residents (エ)has grown so used to this that they find complete silence strange, even uncomfortable, when they (オ)stay in the countryside for a few days.

(I), getting used to noise differs from being unaffected by it. Our hearing evolved as an early warning system, and unlike our eyes, our ears cannot be closed. Even during sleep, the brain continues to monitor the surroundings, ready to wake us if something seems wrong. A passing truck or a slammed door can cause a brief rise in heart rate and pull a sleeper from deep sleep into a lighter stage, although the sleeper may not wake fully or remember anything in the morning. (2)Repeated night after night, these small disturbances may add up to something far from small, which is why noise is increasingly discussed not simply as a nuisance but as a public health issue. People who sleep badly for long periods tend to feel tired, irritable and less able to concentrate, and the cause may lie partly in sounds they never consciously heard.

Noise, like many other environmental burdens, is not shared equally. Homes beside busy roads, railway lines and airports tend to be cheaper, so the people who live in them are often those (カ)who have the fewest choices about where to live. Wealthier residents can buy houses on quiet streets, install thick double windows, or leave the city at weekends for somewhere calmer. Children are affected too. Pupils who attend schools beside major roads (キ)may find it

harder concentrating on their lessons when lorries rumble past the windows every few minutes, and teachers in such schools sometimes have to stop speaking until the noise fades. A problem that seems merely annoying for one family can, across a whole neighbourhood, become a quiet form of disadvantage.

If noise is a burden, quiet is a resource, and like other resources it can be protected or lost. Some cities have begun to treat quiet places, such as small parks, courtyards and riverbanks, as something (ク)worth identifying and defending, just as they protect historic buildings or old trees. Planners can route heavy traffic away from homes, plant thick hedges along roads, and design buildings so that bedrooms face inner gardens rather than busy streets. Such measures rarely make headlines, and their benefits are hard to see in a photograph. Their effect, however, can be felt by anyone who walks from a roaring avenue into a sheltered square and notices, almost with surprise, that their shoulders have relaxed.

Protecting quiet does not mean creating silence. Few people would want to live in a city with no sound at all, and complete silence can feel unsettling rather than peaceful. (3)The sounds that people tend to find restful, such as running water, birdsong, wind in the trees and distant voices, are rarely the quietest ones; what matters is less how loud a sound is than whether we feel free to escape it. A neighbour's music (ケ)that we cannot turn off may disturb us far more than the louder roar of a waterfall we have chosen to visit. Control, in other words, shapes our response to sound as much as volume does, and a good city offers its residents places where they can choose the sounds around them.

Individuals have a role too. Much of the noise in modern life is produced not by factories or aircraft but by ordinary people going about their day: car horns used out of impatience, phones ringing in quiet carriages, music played loudly through open windows. Each of these sounds may seem trivial on its own, yet together they form much of the background that wears people down. Simple habits, such as (コ)turning down the volume, driving more gently through residential streets or taking a phone call outside, cost almost nothing. They also remind us that the soundscape of a city is something its residents create together, not something that simply happens to them.

None of this requires a return to some imagined past in which every street was peaceful; cities have always been lively places, and much of their energy is expressed in sound. The aim is rather to recognize quiet as something valuable that deserves a place in our planning and our habits. Perhaps the first step is simply to listen: (4)[(A) minute (B) to (C) what (D) we (E) paused (F) if (G) a (H) notice (I) for] we hear in a single ordinary day, we might be surprised by how much of it we could easily do without, and by how much calmer our lives might become if we chose to.

*clatter　ガタガタという音
*lorry　トラック（英）
*hedge　生け垣
*soundscape　音の風景（ある場所の音の環境全体）

問 1　下線部(1)で筆者が述べている内容として最適なものを(A)～(D)のうちから一つ選び，その記号を書け。

(A) Sounds can continue to affect us physically even when we are no longer aware of them.
(B) People can train their bodies to ignore any sound if they practise for long enough.
(C) Our ears become more sensitive the longer we stay in a noisy city.
(D) People notice sounds more than sights when they visit a new city.

問 2　下線部(2)を和訳せよ。

問 3　空所[I]を補うのに最適な語句を(A)～(D)のうちから一つ選び，その記号を書け。

(A) Therefore
(B) However
(C) For instance
(D) In addition

問 4　下線部(ア)～(オ)と(カ)～(コ)には，文法的に正しくない箇所がそれぞれ一つずつ含まれている。該当する記号を書け。

問 5　下線部(3)の意味するところを，本文の内容に沿って日本語で説明せよ。

問 6　下線部(4)の［　］内の語を正しく並べて意味の通る英文にするとき，2番目・5番目・7番目にくる語の記号を書け。各語は一度ずつ用いること。

問 7　本文の内容と合うものを(A)～(E)のうちから二つ選び，その記号を書け。

(A) Before engines appeared, the sounds made by people tended to follow the pattern of the working day.
(B) The writer argues that a healthy city should be made as silent as possible.
(C) People who sleep near busy roads always wake up and remember the noise in the morning.
(D) Families with less money are more likely to live in places exposed to heavy noise.
(E) The writer thinks that noise made by individuals is too small to make any difference.

II 長文読解（配点 50点）

以下の英文を読み，後の問いに答えなさい。

Open almost any cupboard, drawer or garage, and you are likely to find things that nobody has used for years: cables for devices that no longer exist, clothes that stopped fitting long ago, books that will never be reread, and kitchen tools bought for a recipe that was tried only once. Ask the owners why they keep such things, and they will usually offer a reasonable-sounding answer. The item might be useful one day; it was a present; throwing away something that still works would be wasteful. These explanations are not exactly false. (1)Behind them, however, lie tendencies that have less to do with the objects themselves than with the way the human mind treats whatever it already possesses.

The first of these tendencies is simple but powerful. Once something becomes ours, we tend to value it more highly than we did before it belonged to us. A person who would never have paid much for a plain mug in a shop may be (a)reluctant to sell the same mug for that price once it has spent a few months on their own shelf. Nothing about the mug has changed; only its relationship to its owner has. ［ ① ］ Shopkeepers seem to understand this well, which is why they so often encourage customers to hold a product, try it on or take it home for a free trial. By the time the trial ends, giving the item back can feel strangely like losing something.

A second tendency concerns memory. Objects are remarkably good at holding on to the past for us. A worn pair of shoes may recall a long walk in the mountains; a chipped plate may bring back the kitchen of a grandparent who has since died. Because of this, getting rid of an object can feel like getting rid of the experience attached to it. (2)To throw away a ticket from a concert we attended with a close friend can feel less like discarding a scrap of paper than like letting go of the evening itself, even though we know perfectly well that the memory does not live inside the ticket. The stronger the feeling attached to an object, the harder this kind of parting tends to be.

A third tendency looks forward rather than back. Many of the things we keep are kept not for what they have meant but for what they might one day be needed for. A box of spare screws, an old winter coat, a stack of empty jars: each represents a small promise of protection against an uncertain future. ［ ② ］ If we throw something away and then find that we need it a week later, we are likely to blame ourselves, whereas the cost of keeping it, a little less space in a cupboard, is spread so thinly over time that it hardly seems to count. In this way, the fear of a single clear mistake often outweighs a long, quiet burden that we barely notice.

That burden is real, however. Possessions take up space, and in cities where space is expensive, a room filled with unused things is a room that is paid for but not lived in.

Possessions also take up time: they must be cleaned, moved, sorted and searched through. Many people know the frustration of standing in a room (b)cluttered with boxes, unable to find the one document they urgently need. In fact, (3) [(A) harder (B) own (C) the (D) it (E) more (F) we (G) becomes (H) the] to find what we actually need, and the very objects we kept in order to feel prepared can end up making us less prepared. Some people also describe a vague sense of heaviness when they look at shelves full of things they feel they ought to sort out but never do.

None of this means that people who keep many things are foolish. (4)Those who struggle to part with their belongings are not necessarily careless or greedy; often they are simply people who take the stories attached to objects seriously. A drawer of old letters may look like clutter to a visitor, yet to its owner it might be a record of friendships that shaped a whole life. The same sensitivity that makes it painful to throw things away can also make a person thoughtful, loyal and attentive to the past. The aim, then, is not to stop caring about objects but to save that care for the objects that truly deserve it, the things we most (c)cherish.

Fortunately, there are ways of letting go that respect these feelings rather than fight them. Some people take a photograph of an object before giving it away, keeping the memory while releasing the thing itself. Others find it easier to part with belongings when they know who will receive them. ［ ③ ］ Being (d)ruthless is rarely necessary. It is often enough to ask a few gentle questions: When did I last use this? Would I buy it again today? Is there someone who would make better use of it than I do? Questions like these shift attention from what might be lost to what might be gained, and that small change in perspective can make difficult decisions feel lighter.

In the end, our possessions are meant to serve our lives, not to fill them. Deciding what to keep is therefore never only a practical question about space; it is also a question about what we value and who we want to be. A home with fewer things is not automatically a happier one, and there is no ideal number of objects that suits everyone. But a home in which each object has earned its place is likely to feel lighter and easier to live in. Clearing a single drawer will not change a life, yet it could serve as a modest first step toward owning things on purpose rather than by habit.

*chipped　縁の欠けた
*outweigh　～より重い・～にまさる
*clutter　がらくた・散らかった物

問 1　下線部(1)の tendencies として筆者が挙げているものを，本文に沿って二つ，日本語で手短に述べよ。

問 2　下線部(2)を和訳せよ。

問 3　本文中の空所［①］～［③］を補うのに最適な文を(A)～(C)のうちからそれぞれ一つ選び，その記号を書け。各選択肢は一度ずつ用いること。

(A) The thought of needing something later and not having it is often more painful than the clutter itself.

(B) Knowing that a favourite coat will keep someone else warm can make parting with it feel like a gift rather than a loss.

(C) Ownership, in other words, seems to add value that the object did not have before.

問 4　下線部(3)の［　］内の語を正しく並べて意味の通る英文にするとき，2番目・4番目・7番目にくる語の記号を書け。各語は一度ずつ用いること。

問 5　下線部(4)で筆者が言おうとしていることとして最適なものを(A)～(D)のうちから一つ選び，その記号を書け。

(A) People who keep many things usually do so because they want to own more than others do.

(B) People who cannot throw things away are generally careless about how they organize their homes.

(C) Finding it hard to give things away can reflect a person’s respect for the meanings and memories connected to objects.

(D) The writer believes that stories attached to objects should be ignored when people sort their belongings.

問 6　下線部(a)～(d)の文脈上の意味に最も近い語句を，それぞれ(A)～(D)のうちから一つ選び，その記号を書け。

(a) reluctant	(A) eager	(B) proud	(C) unwilling	(D) careful
(b) cluttered	(A) untidily filled	(B) freshly painted	(C) completely empty	(D) carefully arranged
(c) cherish	(A) repair	(B) sell	(C) forget	(D) value deeply
(d) ruthless	(A) patient	(B) harsh without pity	(C) well organized	(D) slightly nervous

III　会話文・意見論述（配点 40点）

Professor Penhallow, who teaches cultural policy, has just returned from a conference on museums. After class, she talks with two students, Mio and Tobias, about a debate she heard there. Go through their conversation and then deal with tasks 1) and 2) that follow it.

Professor Penhallow: At the conference last week, one session was devoted entirely to a single question: should public museums charge an entrance fee at all? Several countries have experimented with free admission to national collections, and the results have been debated ever since. I'd be interested to know which side you two would take, since you both visit museums fairly often.

Mio: I'd make them free without hesitation. Back in my childhood, my family couldn't afford many outings, but the city museum near our flat didn't charge anything, so we went almost every month. That's where I first became interested in history. If there had been a fee, even a small one, I doubt my parents would have taken us so regularly.

Professor Penhallow: That's very much the argument supporters make. Museums hold collections that belong, in a sense, to everyone, so it seems odd to make people pay to see their own heritage. There's also evidence from several places that visitor numbers rose (1)considerably after fees were removed, although the increase wasn't spread evenly across all groups. Tobias, you don't look entirely persuaded.

Tobias: Not entirely, no. I like the principle, but someone has to cover the cost of the guards, the cleaning and the care of old objects. If visitors don't pay, the money comes from taxes, and that means people who never visit museums are paying for those who do. Frankly, many regular museum-goers are reasonably well-off and could easily afford a ticket.

Professor Penhallow: That point came up repeatedly at the conference. Some researchers found that when admission became free, most of the extra visitors were people who already went to museums, just going more often. Attracting people who had never been before proved much harder than simply removing the fee.

Mio: But that doesn't mean the fee is harmless. For families like mine, even a few hundred yen per person adds up quickly. And maybe the reason new visitors didn't come is that museums didn't do enough to welcome them. Free entry is only the first step; museums also need events, guides in different languages and exhibitions that connect with people's everyday lives.

Tobias: I agree that those things matter, but they cost money too. If a museum loses its ticket income, it might have to cut exactly the kind of programmes you're describing. I'd rather see a modest fee for most adults, with free entry for

children, students and people on low incomes. That way the museum keeps some income and the people who most need help still get in for nothing.

Professor Penhallow: That's the compromise many institutions have chosen. Others keep their permanent collections free but charge for special exhibitions, which are expensive to organize. Some ask for voluntary donations at the entrance instead of a fixed price, which leaves the decision to each visitor.

Mio: Donations sound nice, but I'd feel embarrassed walking past the box without paying, so in practice it might still keep some people away.

Tobias: And a discount system only works if people know about it and don't feel awkward asking. Proving you have a low income at a ticket desk could be quite (2)humiliating.

Professor Penhallow: Those are both thoughtful points, and they show how much the design of a policy matters. A rule that looks generous on paper can still discourage people if it makes them feel watched or judged. Researchers also stress that the location of a museum, its opening hours and even the way the building looks from the street can form a (3)barrier just as serious as the price of a ticket.

Tobias: So the fee might not be the biggest obstacle after all.

Professor Penhallow: Possibly not, though it remains an important one for many families. For your next assignment, I'd like each of you to visit a local museum and observe who seems to be using it and what might be keeping others away. Then write a short report suggesting how the museum could become more (4)accessible, whether or not it charges for entry.

1)

For each underlined expression (1)–(4), pick the option from (A)–(D) closest to its meaning in this conversation.

(1) considerably	(A) slightly	(B) significantly	(C) suddenly	(D) secretly
(2) humiliating	(A) causing embarrassment and shame	(B) taking a long time	(C) very expensive	(D) difficult to understand
(3) barrier	(A) benefit	(B) reward	(C) obstacle	(D) entrance
(4) accessible	(A) expensive to enter	(B) well hidden	(C) strictly controlled	(D) easy for people to visit and use

2)

Which of the two students, Mio or Tobias, is more convincing to you? Explain your view with two supporting reasons, using between 60 and 80 English words.

Ⅳ　日本文の英訳・語句整序（配点 50点）

以下の日本文を読み，後の問いに答えなさい。

友人や家族と過ごす時間が大切なことは言うまでもない。けれども最近は，スマートフォンのおかげで，一人でいるときでさえ誰かとつながっていることが当たり前になった。(1)そのため，誰にも邪魔されずに自分の考えを整理する時間が，以前よりも持ちにくくなっているのではないだろうか。

一人の時間は，寂しさと結びつけて語られることが多い。(2)しかし，自分が本当は何を望んでいるのかに気づくのは，周りに誰もいないときであることも少なくない。他人の意見や画面に流れてくる情報からいったん離れることで，ようやく自分の内側の声が聞こえてくるのだろう。

もちろん，人との交わりを避けて閉じこもればよいということではない。(3)大切なのは，人とつながる時間と，一人で静かに考える時間との釣り合いを保つことである。

問 1　下線部(1)を英文にせよ。

問 2　下線部(2)を下のような英文で表すとき，(A)〜(J)から8つを選んで正しく並べ，空所(①)(②)(③)にくるものの記号を書け。各選択肢は一度ずつ用いること。

However, it is (　　) (①) (　　) (　　) (②) (　　) (　　) (③) what we really want.

(A) around	(B) is	(C) lonely	(D) nobody	(E) often
(F) realize	(G) that	(H) we	(I) when	(J) which

問 3　下線部(3)を下のような英文で表すとき，(A)〜(J)から8つを選んで正しく並べ，空所(①)(②)(③)にくるものの記号を書け。各選択肢は一度ずつ用いること。

The important thing is (①) (　　) (　　) (②) (　　) (　　) (③) (　　) others and time spent thinking quietly alone.

(A) a	(B) among	(C) balance	(D) between	(E) for
(F) keep	(G) spent	(H) time	(I) to	(J) with
