英 語 問 題

山形大学（人文社会科学部・医学部ほか 英語を課す学部の共通問題）の出題形式に準拠 ／ 問題

注　意

1. 問題部分と解答用紙で構成されている（問題部分 1〜4ページ・解答用紙 5〜6ページ）。答えは解答用紙の決められた欄に書くこと。
2. 試験時間の目安は90分。大問は Ⅰ の1題で，英文は2本。設問の指示は英語で書かれている。
3. 日本語で答える設問（和訳・字数指定の説明）と，英語で答える設問（英作文など）がある。
4. 配点は Ⅰ 200点（計200点）。本予想問題が独自に定めた配点である。
5. 本冊子の英文・設問はすべてオリジナルである。登場する人物・団体・地名は架空。

山形大学の過去問・公式問題ではありません。予想問題であり，大学とは関係がありません。
本冊子は過去の出題形式を分析して作成した練習用の教材です。

I 長文読解（新聞記事2本）（配点 200点）

Go through both articles, then answer Q1 to Q8.

When the Road Outside School Closes to Cars

① At 8:20 every weekday morning, two volunteers in yellow jackets drag a pair of metal barriers across Quillan Street in the town of Kelderby. For the next forty minutes, the short stretch of road in front of Quillan Street Primary School belongs to children. Cars cannot enter unless they belong to people who live on the street, and even those must move at walking pace. Pupils arrive on scooters and bicycles, on foot and on their parents' shoulders, and the noise that fills the street is no longer engines but conversation.

② The scheme, known locally as a "school street", began two years ago after a chaotic autumn term. Parents dropping children off by car had been stopping on the pavement, turning in the narrow road and blocking the entrance. Teachers counted more than a hundred cars arriving in the twenty minutes before the bell. One morning a seven-year-old was knocked off his bicycle by a reversing van. He was not badly hurt, but the accident convinced the head teacher, Marianne Doyle, that something had to change.

③ Doyle asked the town council to close the street at the busiest times of day. She expected the main objection to come from drivers, and she was right. Some parents said they had no choice but to drive because they went straight on to work. Others warned that the traffic would simply move to the next street. The council's answer was a six-month trial, combined with a campaign that aimed both to deter drivers from cutting through and to help families see (what / the street / is / really / for) at the start and end of the school day.

④ Two years on, the results are encouraging but not dramatic. The number of cars arriving at the gate has fallen by roughly two thirds, and roughly one in four families that used to drive now walk or cycle at least some of the time. Air quality near the entrance, measured by a group of older pupils with equipment borrowed from a local college, is noticeably better during the closure than on days when the barriers stay away. Some traffic has indeed moved to nearby roads, but less than critics had predicted.

⑤ The council has since extended the idea to three other primary schools in Kelderby, each with its own timetable. At one of them, the closure happens only in the afternoon, because parents there mostly walk in the morning but collect children by car on their way home from work. Officers say the lesson is that no single design suits every street; what works depends on who uses the road and when.

⑥ Even some of the scheme's early opponents have come round, if grudgingly. Rhys Okafor, a delivery driver whose children attend the school, says he still finds the closure

inconvenient. “I have to park two streets away and walk them in, and that adds ten minutes to my morning,” he says. “But my daughter now knows the names of half the people on our route. We say hello to the man with the dog and the woman at the bakery. I would not want to give that up.”

⑦ Doyle believes the most important change does not show up in the figures. “For years we told children that the street was dangerous, that they should hold an adult’s hand and keep away from it,” she says. “Now, for forty minutes a day, we are telling them the opposite.” Whether that message survives beyond the school gate, she admits, depends on what happens between the gate and the front door.

The Shrinking Map of Childhood

⑧ When Lena Vosberg asks parents in the town of Brisley how far they were allowed to roam* when they were nine, the answers are often surprisingly generous. Many describe whole afternoons spent on bicycles, crossing fields and visiting friends on the far side of town, with only one rule: be home before dark. When she asks the same parents how far their own nine-year-olds may go alone, the answer is usually the corner of their own street, and sometimes not even that.

⑨ Vosberg, who studies children’s health, has spent five years mapping this change. With the help of local schools, she gave pupils simple paper maps and asked them to colour in the places they could visit without an adult. Most of the finished maps showed little more than the school, the nearby shops and a park, [a] many of their parents remembered wandering several kilometres from home at the same age.

⑩ The pattern is not unique to Brisley. Similar studies elsewhere have found that the area children may explore alone has shrunk across a few generations, sometimes to a tenth of what their grandparents enjoyed. Researchers disagree about the causes, but most agree that the change happened gradually, without anyone deciding that it should.

⑪ Parents are not being foolish, Vosberg insists. Roads carry far more traffic than they did thirty years ago, and frightening stories spread quickly online. Many parents also feel watched by other adults. “If my son walked to school alone and something happened, everyone would ask where I was,” one mother told her. Yet the actual risk to a child walking to school in Brisley is very low, and it has fallen over the years, partly [b] fewer children are out on the streets at all.

⑫ Keeping children close has costs that are harder to see. Children who travel on their own tend to be more physically active, and Vosberg’s research suggests that they also learn to judge distances, read situations and solve small problems without help. A child who has never been

trusted to cross a quiet road at ten is unlikely to become a confident and careful pedestrian overnight at fourteen; the skills grow through practice, not through age alone. Parents who are reluctant to let go, she says, are often simply unsure where to begin.

⑬ For that reason, Brisley has tried to make the first steps smaller. Older pupils now lead groups of younger children along fixed routes, collecting them from marked points on the way. Shops along the routes display a small sticker to show that any child who feels lost or worried may come in and ask for help. Parents can follow a group at a distance for the first few weeks [c] they feel ready to step back. Vosberg doubts the routes would work [d] shopkeepers were willing to take part, and so far more than forty have signed up.

⑭ Vosberg does not pretend that the scheme is the whole answer. Children in the busiest parts of town still face wide roads with few safe crossings, and she argues that streets must change as well as attitudes. But she has noticed that children on the walking routes thrive in small ways: they talk more about what they saw on the way, and some ask to go a little further each term. [e] the town can keep that momentum may depend, she says, on whether adults are willing to see the street as a place where children belong, not a place they must be protected from.

Word notes

roam　（あてもなく）歩き回る

Questions

Q1　For each underlined word below, pick the option from (A) to (E) whose meaning is nearest.

(1) ***chaotic*** in paragraph ②

(A) peaceful　(B) disorderly　(C) expensive　(D) cold　(E) ordinary

(2) ***deter*** in paragraph ③

(A) discourage　(B) invite　(C) teach　(D) force　(E) remind

(3) ***grudgingly*** in paragraph ⑥

(A) eagerly　(B) quickly　(C) secretly　(D) proudly　(E) unwillingly

(4) ***reluctant*** in paragraph ⑫

(A) able　(B) hesitant　(C) proud　(D) quick　(E) happy

(5) ***thrive*** in paragraph ⑭

(A) complain　(B) hesitate　(C) flourish　(D) wander　(E) sleep

Q2　Rearrange the words in the bracketed, underlined part of paragraph ③ so that the sentence makes sense.

what / the street / is / really / for

Q3　Render the underlined part of paragraph ④ in natural Japanese.

Q4 In Japanese, explain the writer's point in the underlined part of paragraph ⑦. Use 50 to 60 characters.

Q5 Fill blanks [a] to [e] in paragraphs ⑨, ⑪, ⑬ and ⑭ using the words listed below. Use each word no more than once; one word will be left over. (Words that begin a sentence are shown in small letters.)

because / once / unless / until / whether / while

Q6 In Japanese, explain the writer's point in the underlined part of paragraph ⑫. Use 80 to 90 characters.

Q7 Pick two statements that agree with the articles.

(A) A minor accident outside the school helped persuade the head teacher to act.
(B) The closure has completely stopped traffic from moving to nearby roads.
(C) Rhys Okafor now drives his children right up to the school gate.
(D) The maps drawn by Brisley pupils usually covered only a small area.
(E) Vosberg says the danger of walking to school in Brisley has risen sharply.
(F) Every shop along the Brisley routes has agreed to help children.

Q8 Should children of primary school age be allowed to walk to school without an adult? Write no fewer than 100 English words, drawing on points from both articles.

解答用紙　予想問題 第3回

受験番号・氏名欄は省略。記号は (A) のように書く。

I

Q1

(1)	(2)	(3)	(4)	(5)

Q2

Q3

Q4

60字（20字×3行，10字ごとに太線）

Q5

[a]	[b]	[c]	[d]	[e]

Q6

100字（20字×5行，10字ごとに太線）

Q7　［　　］

I　Q8（no fewer than 100 English words）
